Home + Human = Vaasthu

వాస్తుతో మీ జీవితం పూలబాట

జీవితాన్ని పరిపూర్ణంగా జీవించడమే మానవజీవిత లక్ష్యం

ఆ లక్ష్యసాధనకు మానవుడు తెలుసుకోవలసినది గృహవాస్తు ఒక్కటే కాదు,

మనిషికి కూడా వాస్తు లక్షణాలు కలిగి ఉన్నప్పుడు

వారి జీవితమంతయూ పూలబాటలో నడవగలుగుతారు. **డా॥ కుంచాల హనుమంతరావు**

వాస్తు సిద్ధాంతి, వాస్తు జ్ఞాని, వాస్తు కళా సామ్రాట్ అవార్డు గ్రహీత

VAASTHU THE SUCCESSFUL WAY.

The real facts of Vaasthu to be known and grow as Vaasthu men.

**SAINT, AUTHOR, Dr KUNCHALA HANUMANTHA RAO, AWARD
WINNER OF VAASTHU GNANI, VAASTHU KALA SAMRAT.**

Preface:

Today our country is to be forward there is a reason for that. Even though the Vaasthu of our country is not as much as perfect but most of the inhabitants are followers of Vaasthu and that is the reason today righteousness, Justice, Goodness, Courtesy, respects are prevailing in the country the

development of our country is forwarding in all the directions. To the fact it is not correct that the Vaasthu has to be taken as one of our Ideas and following the some of the principles for our needs and to adopt it for main aim. There are so many of Vaasthu Sastras and all are saying the good for people. But we have to select one of them the best suits you and adopt it for the best of our progress in order to get best our life. Along with Vaasthu man has to be changed to be Vaasthu man by changing Vaasthu in houses so that the evils which resides in you to be expelled out of you and following the best way so that should be useful to you and your society and stand to be a good example of man.

The procedure of making pit for Inauguration.

The procedure of Inauguration (Shankistapana)

Before the Inauguration it is compulsory to confirm that all the four corners to be with equal level and after that measure the four corners at equal lengths, and mark a point at the North-East corner at first for the purpose of borewell and after that when making pit for the purpose of Inauguration it is to be confirmed that the column line and bore to be made should not be in the same line. Making pit is an important thing in the science of Vaasthu as we should all believe that.

At the time of Inauguration we should wear the new clothes and Pattu Wears as their religious traditions will follow by inviting their religious headpersons and performing the Inauguration according to the traditional rights and pray to the god by ending up the Inauguration. And after that prior to all they should gift the Planning Engineer, Building constructing Tapi Mestry and religious headpersons with pecuniary gifts to them to for their satisfaction. The sweets are to be distributed among them should come strength to that Inauguration with amicable good wishes and blessings of elders your house should be developed rapidly. Because of that some of them who come to attend with evil thoughts and others will come with good wishes but we should have to wish them smiling at them and have to have their wishes even if there are evil feelings that should not affect our house.

The day after the completion of Inauguration there should be done any work at that place. Many of us will continue work there after the Inauguration when the money is adjusted and that should be wrong venue at that time and with effect there can be occurred so many ill effects resulting so much of loss and troubles to them. If you want to construct house you must start with by collecting the money and thinking everything taking into consideration and consulting with Poojari and religious headpersons and the venue has to be fixed for the Inauguration and after the day of Inauguration works must be completed as quickly as possible with lapses amidst the completion of house. As per the plan the work should be done very fast.

It is not good to start work after 2 or 5 month after the Inauguration because the pit made for Inauguration may be dried

up in sun and will get wet in the rain and by the result the rituals and prayers have been done might be gone wasted.

If for some inevitable reasons the works should not be performed immediately after the Inauguration we must take care of so that there should not be thrown any garbage, stones and of that type. And it is good to do that after that when you restart the works must send for Poojari or some religious headpersons and get performed mitigation activities at then start the construction works there.

At the time of Inauguration pit must be made at North-East side and start pooja activities. For the Inauguration pooja items should be followed as per the poojari and religious headpersons recommended only. There are so many persons will say differently. The poojas must be performed this way or that way or there should be copper sheets include the pooja Samagri, there should be some Talismans and so like. However you must follow the words of you poojari and religious headperson for your wellbeing.

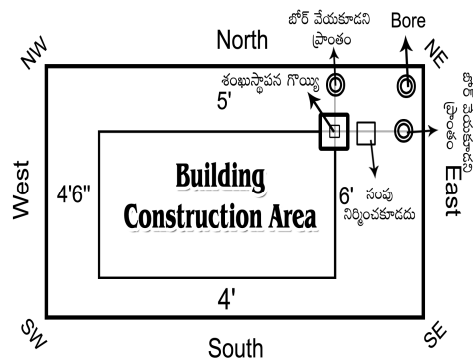

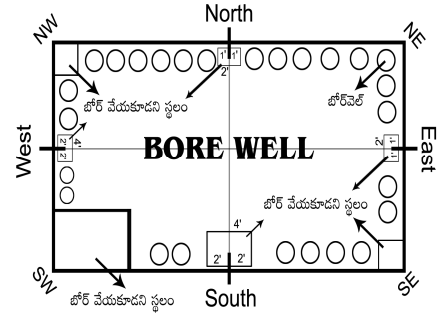

Figure that shows Bore well construction.

Process of construction of Well, Bore well.

At the time of establishing the bore well should be in the North-East side corner of the place. Bore can be made either at East side or at North side of the place. If it is not possible to make bore at certain place according to Vaasthu that can be made in the west or south side of the place. It is not compulsory to follow the 90%

vaasthu concerning the borewell. Because of that it is water which is obtainable from the earth. It is not compulsory to follow the vaasthu rules to get water. When it is not possible to get done bore well in the North-East side corner should be done at any spot but it is helpful to fix pump set at the corner of North-East side of place.

Note: When you making bore must be followed that should not be on the column lines drawn, and not opposite to the main threshold.

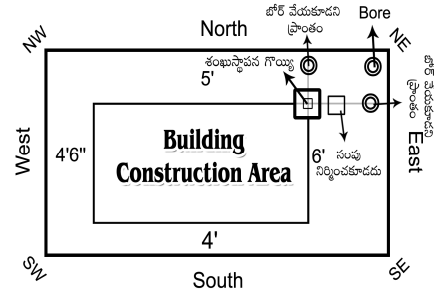

Bore should be done according to figure shown under.

The marking process in the place.

The figure showing that the process of marking of four directions of place as per vaasthu.

At first all the four corners should be made equal level and by investigating that which of the corners crossed above 90 degrees and correcting that corner to be 90 degrees too all the four corners must be drawn equally and after that it is compulsory to take hints of engineer so that place should not be wasted for marking the columns and first of all the north side column pit should be made as an Inauguration pit and after the remaining pits should be done. Before one day the columns are going to be made before making the Inauguration pit a coconut to be broken in that pit, a gamelasigment mal should be thrown into it and portrait a column in that North side and after that all the columns be stood and completed with concrete work and lastly the Inauguration column should get concreted. In this way the construction process of house building should be flourishing. When the time of putting the

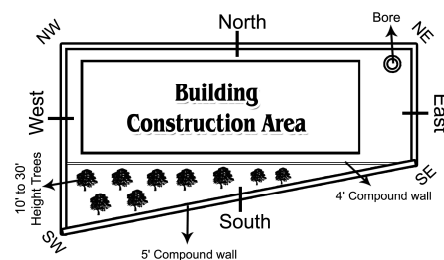

plinth beam water level should be confirmed to be equal at all the corners the plinth beam work should be done for good results. The plinth beam in the northern side should be kept down.

South-East is increased, how to mark the place should be known that process showing figure.

The process of purchasing the place and construction of house.

Before to buying the places some precautions should be taken. Before you are going to purchase the land you should have consulted your guru and poojari must know which facing are best suits to your horoscope either East or West and think of buying that place should be good for future. It is not good to buy every this and that place because that you are having money and once you have bought and built house it will not be useful to consult a Guru after something happened unwanted after. Why because that it is expensive to reconstruct your house according to the suggestions of gurus. It is compulsory to dismantle the building to rebuild it and in this process that the slab should get cracks here and there resulting imbalance to the building. Because of this before to start construction of house should be consulted the headpersons and continue the work yours house that is going to be built will give very good experience. If once you start believing in Vaasthu must follow the best way without interruption. Whenever you purchase land it is compulsory to confirm that there is

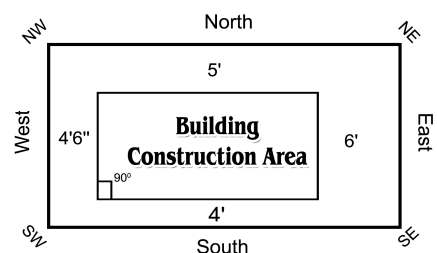

no pit or wells at the centre of it and if they are found anywhere, that you should consult your Siddhanthi and follow his suggestions.

Sometimes when you are buying lands that all the four corners should not be in a good position. But we cannot say that land is good for nothing. It is good for you to think of that which road facing best suits your horoscope. In the later place that the North East is less it does not result to dangers. When we purchase some land we should confirm to see that the Nairuti corner must be 90 degrees and should be marked and North east corner should be little bit higher and all the four corners should be equalized with bricks and in the left over North west side there should be grown Mango trees or coconut trees and other fruit trees it is good according to Vaasthu. Even if any side corner is increased there are so many way outs by correcting it and doing constructions. It is not correct that the North East increased is good and decreased is not good is not correct notion. It is common that there should be differences among the four sides in of a particular place. It is very much impossible to get a land with 90 degree corners in the city. That is why the it is customary to purchase the available land places and get it corrected as per the advice of Engineer and after that with advice of Siddhanthi the house should be constructed.

The process of construction of home in empty lands.

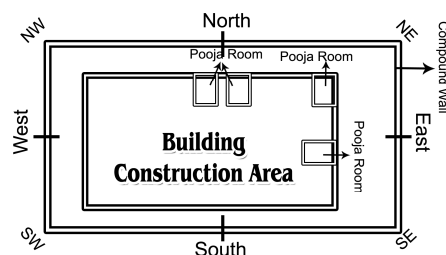

Most of the people will commit mistakes knowingly or unknowingly before the construction. But all have to observe that one thing to consult with the religious headpersons especially civil engineer and discussing the details of construction of houses as per vaasthu there should be flourished with health

and peace and with good ventilation will be helpful construction.

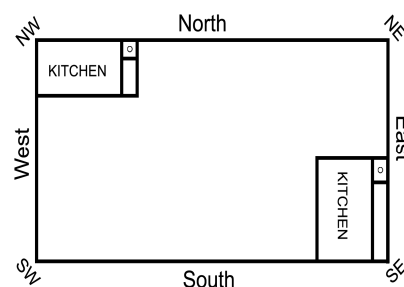

Some precaution while construction of houses.

1. Clean the place very neatly.
2. First of all get electricity connection.
3. Make bore well in the North east side of or otherwise anywhere it is not compulsory to have 90% Vaasthu.
4. Ex:- While marking the there should keep set back of 4 fts in the south, in the West side 4 fts and 6 inches, in the East 6 fts, and in the North side of 5 fts set back. In this way marking is as per the vaasthu. It is good to respect vaasthu than to disagree.
5. While construction of house for your convenience you should consult a Siddhanthi that you believe to confirm whether it is good or bad? You should start construction of building there should be any obstacles with rapid speed.
6. There can be so many persons who will give free suggestions while the construction period but you need not to listen to all of them and only believe and follow Siddhanthi and Engineer's suggestions until completion of construction.
7. In the construction process it is best that there should be toilets in the every individual building that must be in the South west side separately.
8. The attached toilets are to be built in the South west and North West and in the West of the building.
The kitchen should be built in the North west of the house and not possible build in the North west of the side and establish a kitchen plat form towards East directions.
Shape of Pooja Room:

A figure shows shape of Pooja room.

1. When constructing the pooja room in the North east direction must be constructed with light weight bricks thickness of 4 to 5 inches of walls because of the reason it is not good having heavy weights in the North East side.
2. When it is troublesome to construct pooja room in North eqst, East south east is ideal to build the pooja room it is ideal to build a pooja room in between the East and north east East north side.
3. In the North North West side the pooja room is very ideal.
4. If it is not possible to build pooja room at any place it is ideal to build the pooja room North North west of children bedroom just above the 3 fts height in East North east side with a cupboard.
5. If there is wall around the room it is ideal to do pooja keeping a photo of the god on the floor.
6. It is better to follow some rules about the pooja room. Most of the people have so much of devotion but not have poojas against the rules to fallow to how to build the pooja room. But when you build a pooja room you should know some suggestion from the known persons.
7. If it is not possible to build a pooja room it is ideal to hang a portrait of the god on the South East side corner on the 4 fts height and do pooja and offer Harathi to the God.
8. Construction of kitchen room.

The figure showing Kitchen room

There is very important place for the kitchen when construction of house. Therefore we have to take best care of building the kitchen room according to the vaasthu. There should ample ventilation for kitchen room and there

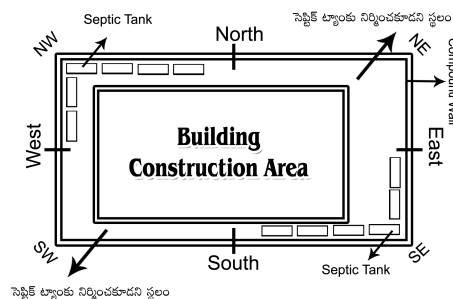

should have been so much of light as much as possible. In the kitchen room must be there two smaller ventilations and one big window. It is good to confirm there should a exhaustive Fan whole in the kitchen room. Most the best to build the kitchen in the East south eqast of the side is the best of all . In some inevitable conditions it is not possible to construct the kitchen room the East south east side of the house it can be built at side of North East south side. If it is built in the East south east side of the house or built at side of North East south it is compulsory to make kitchen plat form towards east direction. When cooking the cook must have east facing while cooking the food. In this way the cooking has to be done the members of that house will have good health and have good relation with relatives and unmarried girls will get marriage settlements are possible.

The housewife who have the habit of offering food, old items, clothes to the poor people are called vaasthu housewife.

The process of building a septic tank.

When building a septic tank it is good to confirm that the compound wall is not touched with that at side of east south east corner. When it is not possible to build the septic tank in the side of East North east it is ideal to build it in the south - south east. At the same way while constructing the septic tank the compound wall should not touch the building wall. When it is not possible to build a septic tank you may build it in the West south east direction.

In the East north east or in the north east north side to build a septic tank is good at all. In the same it is not good to build septic tank in the south west south side and west south west is not good for building a septic tank. When constructing the shame of septic tank concrete, bricks, outlet, inlet is to be made in a systematic way. It is

compulsory to follow when constructing septic tank to confirm that it must not in the direction opposite to main threshold. These are all the important things of vaasthu science.

A figure showing the septic tank.

The process of establishing the Sump:

Sump (underground water tank) figure of showing frame of sump.

While establishment of the sump that is most in the East north east or north east north side. When it is not possible to establish the sump in the east, north east side that should be build in north north west side. While building a sump it is compulsory to confirm that it will not touch the compound wall and building walls must be left some setbacks. It is the best to establish a sump away from the water tap or pumps and away from the borewells.

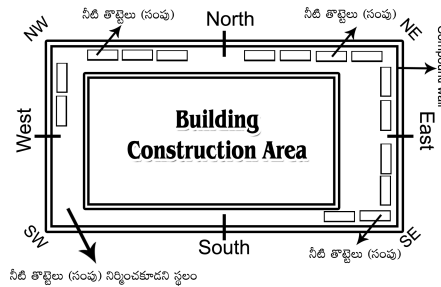

A sump should not be build opposite to the main threshold of house. Most of the people build a sump first of all and start construction of building later through this that sump. After finishing the construction of the building they will not the cover that sump.

Hence what you have to observe is that after the completion of construction of the building a sump can be used later. Whenever that sump is not use you have to consult a religious headperson or poojari to conduct poojas for the sump and dismantle the walls of the

sump. And later that sump should be filled up with good soil and flooring is to be done over that. By doing this some of evil effects of house will be out that house. If you want to use a sump it should be cleaned for every 6 months and wipe it out and refill it with fresh water is ideal way of use.

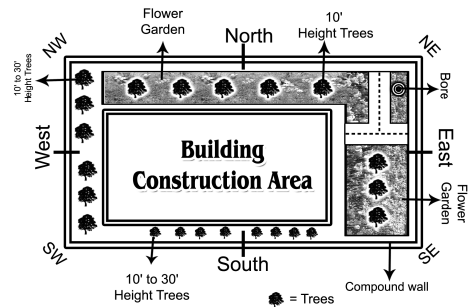

It is ideal to close it whenever it is not being used and open it when in use. Do not forget that sump is also a part of vaasthu.

To nurse the plants inside the house compound.

To plant and nurse plants in the place of house.

Most people usually would like to nurse the plants in the compound of the house. You may nurse plants of 2 to 4 ft height plants in the East side of house. In the north side there can be nurse plants of 5 to 10 ft height, in the west side of the house 10 to 15 ft height plants and in the south side of house the plants of 10 to 30 height plants can be nursed in the compound of the house. It is healthful to keep flower plant in vases on the compound wall and will give delightful life to all the family members. If there is so much of empty land and in that plants are fostered the head of the family will get good profits in his business. In the south south west side being fostered big trees in that house education and health can be increased. In the west side of house trees are fostered the men resides in that house should become political leaders. In the east side of house trees are fostered the girls of that house will get higher education, and good alliance for them, job opportunity, and learning the traditional values will be helpful to get good name and fame for their parents. Every day before to pouring the plants must attend nature calls and washing face and then clean the flower plants and pour them. If you have habit of offering pooja in the morning you should have a bath and salute the plants before picking the flowers and start picking flowers and offer them to god in the pooja. If you do so the plants' grief should not affect you.

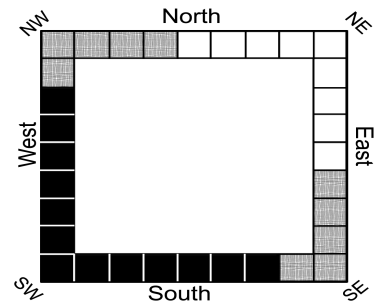

- Once in a month on Saturday must open the windows and cleaning of thresholds, for 9 hrs air should be passed through the house and light is allowed into the house and by this way the wealth (Danalakshmi), knowledge (vignan lakshmi) and good activities are like auspicious performances are to be done in that house if you do so.
- In this world there is great place for plants so we should protect the environment is our duty to do.

At what side of the house weights should be:

A figure showing the weights should be kept in the house.

In the construction of house at time of the completion cupboards are to be establish there some precautions must be taken. Concerning the weights in the house some cautions should be taken otherwise the head of the family will have to face so many financial losses and will have to face health problems. Therefore the certain cautions must be taken in order to get good results. In south side of the hall a cupboard should be established or in the west side of the hall. If it is not possible to establish cupboards in the above mentioned sides you may establish it in north south east side corner. In the north south east direction the cupboards must be light weight. In the kitchen room a cupboard can be established at west or south side. At the east or north side of the house attics are not established and if it be so it is not good. In the children bed room there can be establish the pooja room is the ideal one. In the master bedroom at side of west or south side a cupboard can be established. In the north and east sides sign sides are not to be established.

When you keep the berua must in the direction facing north side and at the same way whatever you keep in the house that must not be at the side of north and east side. If it is compulsory to keep them that should be of very light weight like computer, Teapoy, chairs, and so like.

In the children bedroom bureau, double cot bed should be kept at the West south corner and in the east and north side should be kept light weight items.

In the hall at east and north side should not be kept the heavy weight. And at the west and south sides of the hall light weights are to be kept. If hall is in the north east side and taking it as north east of the house you should not keep any heavy weights in that hall except articles like TV, fridge, sofa, chairs, computer, showcases and the like items can be kept in such halls. In the kitchen room the sink must be at the side of east north east. At

the north side of kitchen no weights are not to be kept. You can keep so much of weight in the south side of kitchen whatsoever you have to keep.

In front of the house Varanda empty land there should be kept light weights in east side or otherwise can plant plants there. In the north east north no weights are not being kept. In the south west it so much better to keep heavy weights. In west south east side can be kept light weights is good.

In this way the inside and outside of the house the precautions whatever needed for good results the persons live in that family will have good health and developments and they may be offered lucks like good progress in businesses, developments of children and good engagements for children the good relationships can be maintained in that house. Can gain good name in the society and stand example with their behaviours.

The apartments with North east stroke to what extent the vaasthu should be there.

In the individual buildings will follow the vaasthu upto 95%. And in the apartments and group housing there are from 40% to 60 % of vaasthu is being followed. More to that extent of vaasthu is a wring thing to expect. Pertaining to the apartments no body can build apartment with 100% vaasthu. As to the purchasing of a flat in a apartment you have to observe that there should be kitchen in the north west side, in the north east south east side should be children bedroom, in the west south side a master bedroom and the toilets should be in the right areas like things should be confirmed. The flat which you are going to buy there should be lift or steps like things have to be confirmed. If there is like you should consult your Siddhanthi and religious person for little bit changes in that flat. Without having changed these vaasthu do not blindly follow heresy to perform some poojas in order to drive evil effects thereof. You have to confirm that there should be sufficient air and light in that flat. Ample air and light is equal to 50% of vaasthu.

1. For one room there should be not less than two windows you should confirm. While the construction of apartment above the every

- threshold adjacent to slab there should be 4 inches of mesh should be there to be confirmed and this is also one of the rules of Vaasthu. Like the same in every threshold a mesh should be fixed and then only every body of that house will live happily with health and development.
2. As much as possible there should be not less than two windows in a room with cross ventilation. If so residents of that house will be flourished with health and development.
 3. When the fixing the cupboards in the apartment it is good most of those must be in the south and west side of the flat.
 4. In the apartments most weights should be kept in the south side of portion. In the same way buraus should be kept at north side of flat and by doing so there can be very results.
 5. In the toilet room the basin should be kept to sin on towards north side facing.
 6. If not possible that should be in the south or west side is good.
 7. There should be on 60% of vast and no apartment has 100% vaasthu.
 8. Road stroke should be followed in case of apartment.
 9. Water tanks should be fixed at any side over apartment.
 10. It is best if possible should be established in south east side.
 11. In the apartments cellar watchman room can be established at any side leaving north east side. No concern of road stroke for apartments because there are so many people who live in the apartment. The effect should be with all the people who live in hence the road stroke will not show any effect on a single person particularly so that nobody will suffer any financial and health problems. If there is road stroke it is better to put some flower plants in the balcony and in front of the flat then the road stroke should not be on the flat. The people who live in those apartments are flourished in their professions and businesses and some others who fear lot about that and fell ill. Hence if you have any doubt about your flat you should consult Siddhanthi and follow his suggestions.

Business Centres , Shops- Vaasthu.

In the business shops there must be taken precaution well before. If there is road in the in east there will not any bad effects to that shop. If there are fears about the vaasthu and by planting the small flower plants in front of the shop can decrease the evil effects and human grief.

In the north side of the shop if there is road no bad effect can arise. Inside the shop that there some weights should be in the west south side corner and the owner has to sit on the south east side. The inlet way should be in the north east side and that shop can develop day by day with flying colors.

If there is roan in the West side that shop has to be changed lot bit for better results. In such cases most of the weights should be kept at south west side and in south east side the way to inside, in the east north east poojas activities should be performed, in the south west side , south east south side the owner's sitting place will give good results. Some of flower vases must be kept before the shop. By this way making small changes as per the vaasthu will good results making their business with profits and rapid developments.

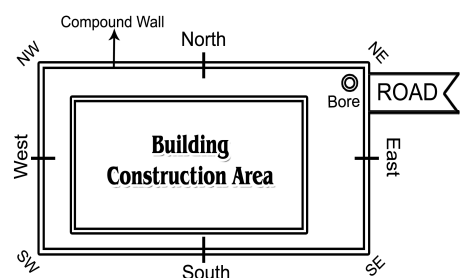

The south road stroke in front of that shop must be kept Jisti Bomma. In the evening times must be adorned with lights and must put some flower vases. In this way the vaasthu is followed the business should be flourished with profits and rapid development.

Road Stroke (Street Stroke)

The precautions that must be taken about road stroke.

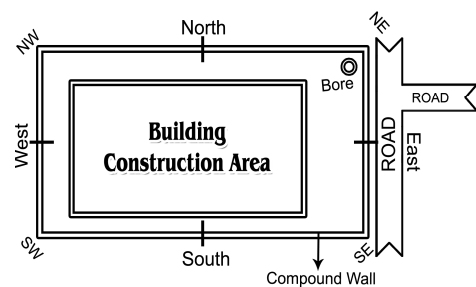

The road stroke which has come from east north east side.

It is compulsory to believe in vaasthu at first and need not to fear about the evil effects thereof. If there is no road in east side across that coming opposite to your place and ends there this is called really the street stroke. With effect there can be so many good omens. About this kind of road stroke you have not to worry a lot but

before to construct the compound wall you should have to estimate the street stroke can be and extent the compound wall and make precaution measures keeping the Disti Bomma and idols of gods in front of their buildings and by doing so they will flourished with health and wealth and good progress in their lives.

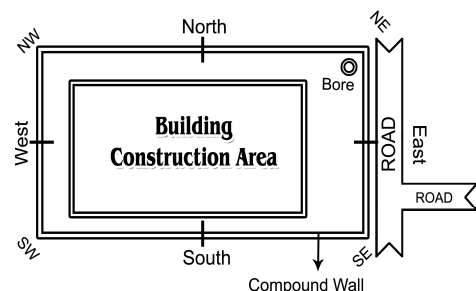

- At time of construction of houses taking into consideration their wellbeing and vaasthu and keep belief in their hardwork might be go on through flowers way.
- On the building terrace some vases of plants must be kept and it has very good effect.
- In apartments some flower vases should be kept for good results is as part of vaasthu and if a road is coming opposite to the another road in the north east a figure showing stroke of east

side road and another road opposite to east side touched road stroke should also be called. With this kind of road strokes the people who reside in those houses will have no bad effects. Like this east north east roads stroke will also give most are good effects only. But the east north east stroke of road is there the gate should be kept at east north east side corner. In the north east north side of the building the main threshold main gate has been fixed and the windows are fixed in the east north east side. Outside the building in the east north east corner should be kept your beloved god for the good results. In the same way opposite to the road the compound wall the beloved god's idol should be handed over there and all the best will be the outcome there from.

East- south East Road stroke.

Map showing road stroke if there is road in the east side and opposite to that road.

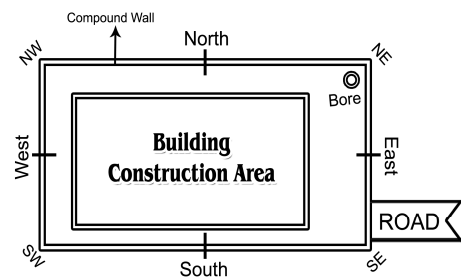

East – south west road stroke is somewhat not bad.

East south west road stroke is there you may keep the idol of your beloved god for good results and in this situation it is better establish steps in the south west side. If there is east south east road we should establish the main gate in the south east corner adjacent to the kitchen a pooja room should be established. If the east south east road stroke is there with changes in the vaasthu you may get very good results thereof.

Road opposite to south east side without having any road in the east.

Without having any road across the east side and a road comes to the corner of south east side and ended up there it is called as east south east road stroke. Road stroke like this in the south west the road should be developed 3 ft above the compound wall a small temple should be constructed there over the wall and keep your beloved god in that place will give good results. And the same way the south east corner road should be kept with some colorful flowers plants the stroke of south east road stroke can be mitigated. Once in a week must offer poojas to the god idols all the evil effects of road stroke will be decreased. The residents of that house will not have ill effects of that road stroke of south east road and get better developments in their lives.

North – North east Road strike.

A map that shows road stroke of north having a road and another is opposite to the north east side corner that is called as north east north road stroke. The persons who are residing in the buildings having this east north east side road stroke may get so much of wealth in the businesses. The north east north road stroke there

should be established the main threshold in the east north east side and in the north east north side main gate and in the north side of building should be kept with pooja room will be helpful in every sense. At the east north east side the compound wall no gods' idols are not needed to be kept there. The north east north side building resident will have good health and wealth and get so much of development in their life.

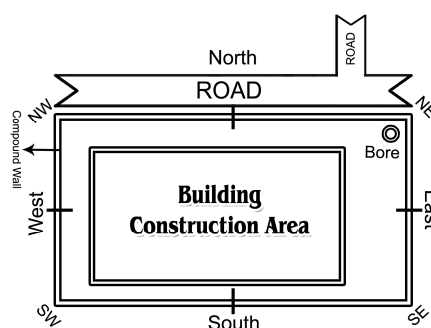

Map showing that not having a road in the north east side and a road stroke which comes opposite to north east east side. About these kind of road strokes so many vaasthu science is discussing in many a ways. The Siddhantis and engineers suggestions should be followed in this concern in order to know all the effects of this road strokes to the best effects the needful changes must be done for the better results. When there is north east north road stroke the main threshold must be kept in the north east east side of house and steps should be kept in the North West side. When these kind of road strokes some idols of your favourable gods must be kept in north east side and the owner of the building can lead healthy, wealthy, with good children and delightful lives.

North –north West road stroke.

Map showing road stroke having road in the north side and another in the North West side corner.

The road stroke of North- North West is somewhat good.

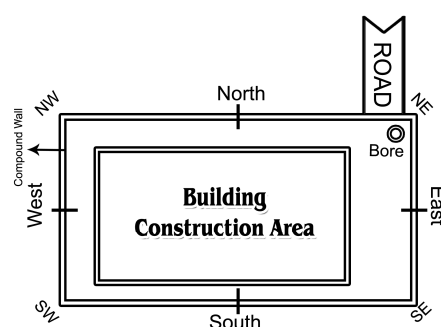

The road which comes against the road north north west side an idol of yours favorable god establish over the compound wall 3 ft above the wall and do offer the poojas and do prayers the evil effects of that road stroke will be mitigated. If there is road stroke in the north east north side should be kept a main gate at north east side and in the east north east side the main threshold.

And at the same way the pooja room has to be established nearby the North West north direction will be resulted well. With smaller changes having done according to the vaasthu all the persons including with owner will enjoy forever with good results with health and wealth.

A map showing that there is no road in the north and there is road coming against the North West side road.

As there is no road in the north side and a road coming across the North West direction is called as North West road stroke. In that way the road has come across is nearby the our land we should establish a as much as we want to be enough for us and the remaining land should be utilized for the fostering the flower plants and keep the idol of our favorable god on the compound wall. And in the east north east side a main threshold must be kept or a car shed. And there are so many road strokes you must consult a Siddhanthi nearby your place and an engineer for suggestions and get best results out of them.

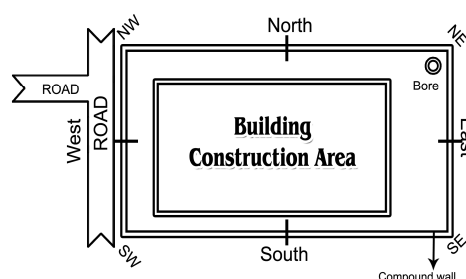

West- North West road stroke.

Map showing the road stroke having a road in the west side and another road in the North West side corner.

The West- North West road stroke is not for good.

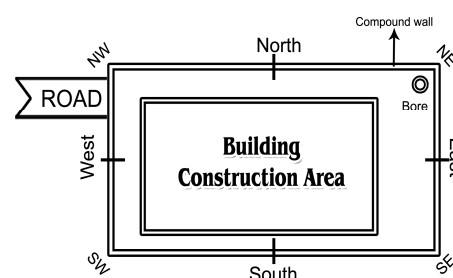

There are so many bad effects of west northwest road stroke will cause so many troubles. At this position a small temple to be established adjacent to the compound wall and place an idol of your favourable god and once in a week offer pooja to that god. And after that

some 2 to 4 flower plants should be planted near that temple. By that way the main sight of people who come way falls on the temple of god but not on you and they will think well that way. Because of this the human sight will not affect you. So when the northwest stroke of road, how to deal with.

A map showing road stroke that when there is in the west and a road comes against the northwest side.

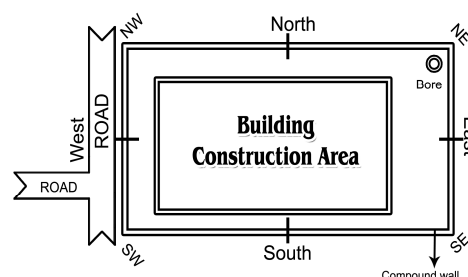

When there is not road in the west northwest side that comes against the road is called road stroke. At that position the road stroke you have to keep the bigger gate in the west northwest side and the remaining place an idol of god should be kept inside the compound and foster a tree of 10 to 30 ft height. At the same way the main threshold must be in the north northwest side. In the northeast side pooja room has to be fixed and some flower plants are to be fostered in the eastern part. All these things are the part of vaasthu and when these have been according to the vaasthu the persons who live in that house will not have problems of health and finance.

West- southwest road stroke:

Map showing the road stroke a road in the west side and another road is in the corner of east north.

West – North east road results in so much of troubles.

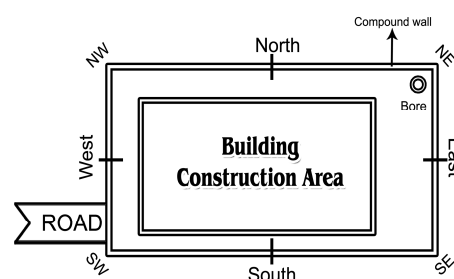

When there is west north east road stroke will give so much troubles than any other road strokes. To the fact there is scope for so much air facility which gives so much of delight to us. But for the vaasthu the needful changes should be done to get better effects. If there is a west north east road stroke must be

kept main threshold in the west- North West side. A pooja room must be kept at east- north east direction and must keep flowers plants in the east side. And keep the flower vases on the west of compound wall and must be kept colorful flower plants should be fostered. And must keep a Distibomma in the north side corner with red and black color, and green color distibomma must be drawn and in the west south west side there might be a current pole or telephone pole for good results. At this situation a little changes should help to get results and development in the businesses.

A map showing the road stroke even if there is road in the west and a road comes opposite to north east side.

As there is no road in the west south west side and a road comes opposite to west south west road stroke. In this situation must be kept a idol of favourable god and must be kept dristibomma with white, red, blue color drawing the figure on the corner of south west side of portico. A main threshold should kept either in the west north west or north north west. At the north road a tree of 10 to 30 ft height must be fostered. If there is no current or telephone pole available a iron rod of 20 ft height must be kept at that side.

In this way some of the vaasthu changes about the north east road strokes cannot affect the men who come into that house.

With this way the men who resides in that house will have knowledge, wealth, health and all the way the best.

South –south east side road stroke:

A map showing the road stroke as there is a road in the south and another in the south east comes opposite.

The south- south east road stroke is somewhat good.

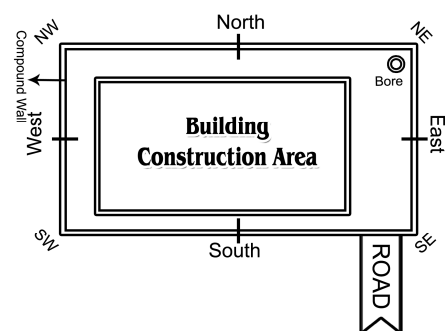

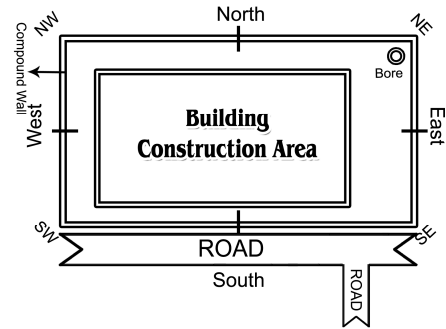

If there is south east road stroke a dristibomma must be kept on the compound wall and just away from that an idol of your favourable god must be kept. If it is possible some

flower plants must be kept there for good results. In the hall a pooja room established in the east south east side. If there is south south east road stroke a main threshold must be kept in the north east side. The north east corner should be constructed 4'6" ft height. The east south compound wall should be 5' fts height. In the north east corner 10 to 30 ft height tree must be fostered. Whenever it is possible must keep a iron rod of 20 ft height. That should be 2ft height more than the building height. In this way some of vaasthu changes are done the people resides in that house get progress at business, politics.

- Even though a house built as per the vaasthu if there is not followed the neatness in the house not to be called a vaasthu home.
- If the air is not allowed in the house that house should not be called vaasthu home.
- If it is adorned with flowers and indoor decoration in the bed room and in the hall it will give comfort to who resides in the house. This is also a part of vaasthu.

A map showing the road stroke having no road in the south and there road opposite to south east side.

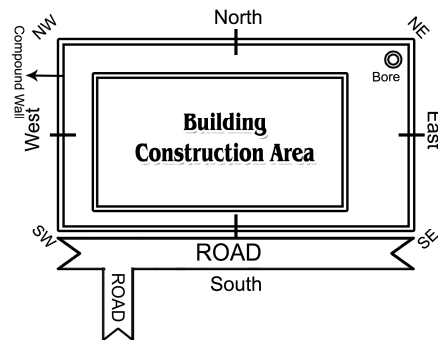

As there is not road in the south and a road come opposite to the corner of south east side is called south east road stroke. In the road opposite to your house a coconut tree of 15 ft to 30 ft height should be fostered for good results. In this way it is possible

that you can keep main threshold in the east north east side. And build a small temple to the compound wall and kept the idol of your favorite god can be good. In this way small changes are to be done the people live in that house will not have financial problems and can develop at politics.

South- north east road stroke.

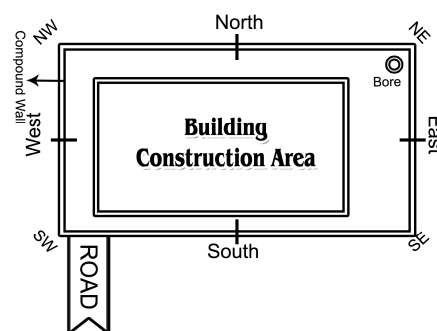

A map showing a road stroke as there is road in the south and another road comes from opposite side to north east side it is called south north east road stroke. If you say that this name the lands should not be sold out. Because of that people of state have got the fears about this road stroke. In some states great importance will be given to -+

These road strokes because of these road strokes there can be ample air facility, light, and publicity are available at most. Therefore those people prefer these lands with road strokes. But in our state people believe that these road strokes are good at all the times. As per these road strokes there should be some way out with remedies. About the north east road stroke a small temple should be built and kept an idol of your favorite god and do poojas regularly and if it is needed must keep the light with help of neighbors and foster some flower plants and then people live in that house will be flourished and will be stood example for others.

A map showing the road stroke having that there is no road in the south and a road comes opposite to north east side.

As there is no road in the south and there is road in the north east side is called south north east road stroke. Can be established main threshold in the North West side. If there is main threshold is at the north south east side the kitchen must be in the east south east or otherwise can be established in North West side. In this situation a pooja room must be

constructed at north south east side or at the corner of north east side. The evil effects of South north east road stroke are to be vanished there should be kept a shapeless dristibomma at the corner of south- west south over the building and white color flag should be kept at corner of building in the North east side. To divert the sight of the people there should be kept an idol of your favorite god to the compound wall in the south side. And the flower plants should be fostered on the compound wall for better results. When the north east road stroke 10 to 30 ft height trees should be fostered. And in this north east corner road stroke there should be established at north east side corner. Septic tank should be established in the east south east side or North West north side. With these smaller changes to done will improve your health, wealth, benefits and opportunities.

The method of establishment of Water Tanks over the house and inside the factory compound.

A map showing the water tank establishment.

When establishing a water tank over the top of house that should be at north east corner or North West corner. If still it is not possible to do so can be established in the south east side corner. When construction of Water tanks certain measures must be followed.

While constructing water tank there must be kept distance of 2 ft between the slab and water tank for better results. Or the column should be raised upwards with 4 ft the water tanks can be established in the north east side. Some people in the group housing the column raised above the staircase and the water tank should be established over there. As much as possible a water tank should not be kept at north – north east, eastern north east side is for better results.

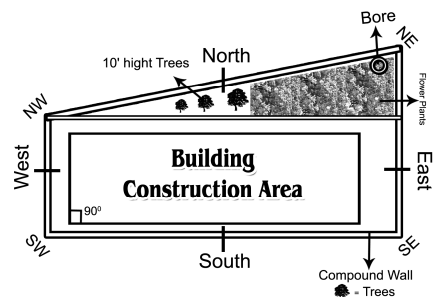

Some construct water tanks on the flooring raising the walls. With this there can be so much of troubles raised. Hence concerning the water tanks, some of vaasthu rules must be followed for good effects.

Most of the water tanks in the factories are established in north east corner or North West corner and southeast corner water tanks must be constructed with height. In this way the constructions of water tanks in the factories should be flourished for long period. The water tanks above the house and in the compound of factory should be according to vaasthu for good results.

- There are so many religions, religious books, it is not compulsory to follow them but it is compulsory to respect them.
- The house wife customarily should wake in the morning and pray to god and start cooking the food and household works. In that houses there should be all the best omens only.

How to build buildings in the increased eastern north east -1

Most of the people when purchase the lands must observe the corner of north east is whether decreased or increased? it is general to do so. But for the fact the north east corner is to be developed for the good results they think. We should that land as it has the increased north east eastern corner. And after that they do not know how to keep the set back in the eastern north east corner and by committing mistakes doing against the vaasthu principles. The increase part of the eastern north east should be kept aside and then marking the four corners equally and curved place should be kept straight and should be constructed a building in that as per the vaasthu. After that the increased place of the eastern north east corner marked with the bricks, the curved area from west to east should be constructed a small wall in the height and in the northern north east side 10 ft height wall the empty can be used for corridor place to go to and fro. And in the remaining land some flower plants can be fostered for the better results. In the

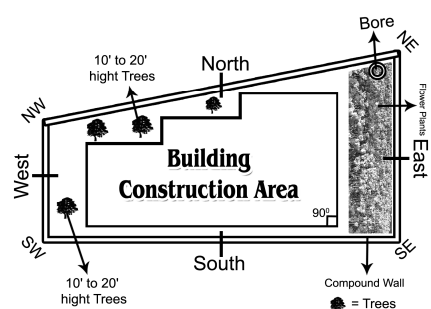

northern North West side some trees of 15 ft height should be fostered for good results and around that place a compound wall should be made. In this way as per the vaasthu rules a compound wall should be built there. At the northern north east road stroke towards northwest the car parking should be built for better results. But in the corner of eastern north east side a shed should not be built. In all the corners of the eastern northeast corner has very importance. If we can respect the vaasthu and follow it you can have very healthful and happy life. In this way the eastern north east side increased the people live have knowledge and can had very education. They will live their lives with health and wealth. There is so much of scope to be developed in their lives. And at the same way there should be so many enemies. People live these houses will lead very happy and with health and will grow standing as an examples for others. As increased eastern north east is that much powerful one the building must be build with help of good engineers and vaasthu Siddhanthi then you can have very good future to live in such houses.

How to build buildings in the increased eastern north east -2

A map showing the increased eastern north east-2

Today the people are suffering from that there is not availability of residential land with vaasthu. In this situation the lands which can be purchased without any option leaving and we have to change the vaasthu in that land with any corner is increased or decreased and being adjusted with land available making the small changes in it and building are being built now days. The lands having increased in the eastern and northern east side the buildings have to build in the idea of most of the people today. To the frank the drawing has to be drawn with zigzag and as per the vaasthu rules buildings can be constructed in that place.

For example: 2 fts in the south, 3 ft in the west, in the north 4 fts and in the east 5 fts are to be marked even though in the curved lands too can be built a buildings in a zigzag method. The constructions were done in this way some flower plants can be fostered in

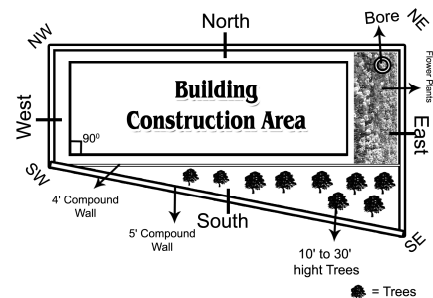

the eastern part. In the same way in the northern northwest side trees of 10-15 fts height to be fostered and at the same way 10 to 30 ft height trees to be fostered in western side to get rid of the evil effects thereof. In this way buildings are to build the people who live in that house can develop in different ways like education, employment and the like. Children will improve their education. Some of the people will progress in businesses. And get growth in all the ways of wealth and harvests.

The method of construction of building in the eastern southeast increased corner-1

A map showing the figure of eastern south east increased corner-1

The method of construction of building in the lands of eastern southeast increased corner places. In the situation of south eastern corner there should not be any evil effects. The land must be marked in the four corners, in between the increased marked place 4 ft height compound wall should be constructed. Around the total

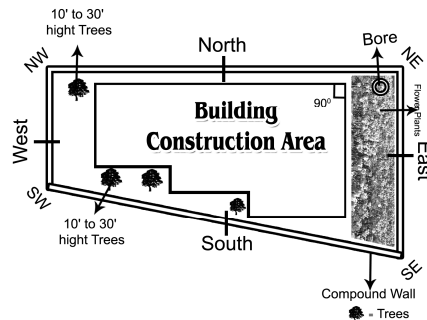

land a compound wall of 5 ft height should be constructed and must keep idol of your favorite god in the south east side and poojas to be performed regularly. The increased corner of south east side has some evil effects. In that situation the east northeast side corner the day of inauguration has to be done at corner of south east increased corner, 2 ft deep pit has to be made and performed the poojas offering the milk and water and then only start the building works. In the south east corner in the pit poojas have to be performed and keeping the idol of your favorite god and thinking of the god do poojas with Vedic mantras. In the land of this situation car shed has to be constructed for the best results. The temple of 4 ft height has to be built and foster the flower plants in the empty land will give very results. In this way the increased corner lands people have to clean the drainage system around the compound wall twice a year. This is also a one of the part of vaasthu. In this way the houses built and people who live in those houses with vaasthu

principles will get profits in their businesses and advanced in their businesses and their children will become useful citizens.

The method of construction of buildings in eastern south east corner increased places-2

A map showing the figure of increased corner in the eastern south east-2

In the incident of eastern south east increased corner the method of buildings houses. The southeastern increased corner there is no evil effects with that as per the vaasthu. That why the demand for those land very much in the city the lands with perfect vaasthu land there so may trouble to get good

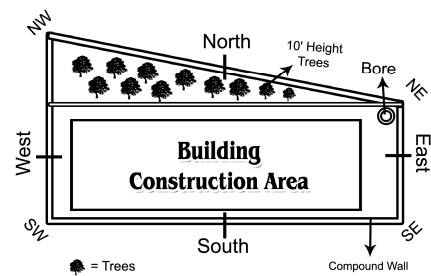

lands in the city. Therefore the building has to be marked in the three sides according to vaasthu with chief vaasthu Siddhanthi and engineer the building has to be built. In this way constructing the buildings we have to get changed in the as per the vaasthu which will effect somewhat bad. To get rid of these evil effects of this we should have to be performed some poojas with the Siddhanthi and start the works of construction of building. When the south eastern corner increased a compound wall of south , west towards east is 6 inches more than the compound wall of northern side. And must take attention to be a bore or well in the eastern northeast side. Building has to be built with zigzag way and in the southern part of 10 fts to 30 fts heights 30 height trees must be fostered. In the eastern part some flower plants have to be fostered. People live in these houses have very good health and have good relationships with the relatives, and with neighbours and earn good name and fame. There is lots of scope improve the future of children with very good improvements.

How to build buildings in the lands of Northern northwest corner increased-1

A map showing the increased northern northwest corner-1

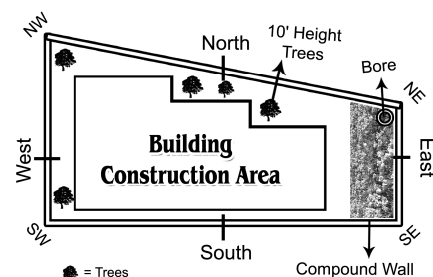

There are so many methods of construction of buildings in the increased northern northwest side. The increased northern northwest corner has evil effects of vaasthu. In this kind of land first of all marking should be done at four corners and in that marked area a wall of 4 ft height should be made and the total land has to be bounded with compound wall of 5 ft height. At the northern increased corner some beautiful garden should be fostered and in between these some trees are to be planted and for sitting purpose in the evening times for adults and children establishing the cement chairs in that garden. If there possibility to establish a car shed should be constructed car shed and otherwise a watch room can also be established in that side. In this the area is increased flower plants should be fostered in the eastern side for good results. The people who live in these types of houses can develop in the political and can migrate to the foreign countries and good connection with the people. In this kind of house the housewives have to perform poojas twice a week with good mind they will get piece of mind and have very good health and also develop to be a ideal housewife for other housewives. Can also get positions in the mahila mandaly and in the cities they get good recognition among the neighbor housewives in that area.

How to build buildings in the lands of Northern northwest corner increased-2

A map showing the increased northern northwest corner-2

There are so many methods to construct the buildings in the increased area of northern northwest corner. The increased northern northwest corner has evil effects of vaasthu. In this kind of land first of all marking should be done at four corners and start construction of building. You should have to consult your Siddhanthi and according to the suggestions of him a pooja to

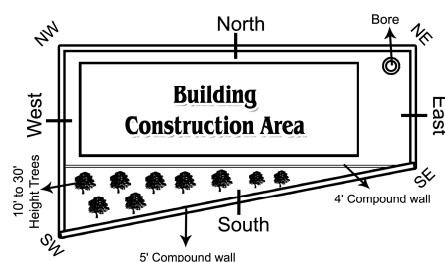

be performed on the inauguration day. And after that no pooja has to be done in order to get rid of vaasthu evil effect. In this way the house in the zigzag shape the remaining empty land some flower plants are to be fostered for good results. In the eastern part some flower plants to be fostered. In this kind houses people live having some financial problems with the changes according to the vaasthu they easily come over this problem. Concerning to the children precautions should be taken for their betterment. This does not mean that they will spoil their lives but for their developments the parents must have to be taken for their progress in the future. The people who lives in this kind of houses must and should at incidents of birth days should food donation to the poor, and if possible should have to endow the poor with new clothes, if not having that position you may give your used clothes, used steel utensils, to the poor the evil effects of the vaasthu will be gone. The people who live in this kind of houses will get unexpected wealth to become rich. There is lots of scope the that housewife will become an employee and develop.

The increased corner of Southern West Northern east and how the construction of houses will be done. -1

A map showing that south north east increased corner figure-1

Here are so many methods of constructing the buildings in the south west northern east increased corners. The corner of northern east is increased there should be some evil effects. Lands with these kind of increased corners must be marked at four corners and at the centre of the marks a 5 ft height compound wall should be established and around that place a 5 ft height compound wall should be constructed. In the north east corner is increased the people live in that house will face financial, mental, physical, and business problems and resulting the undeveloped and all kind trouble are to be faced. In this crisis you should consult your Siddhanthi for the suggestions and when you are decided to construct the building with the help of the engineer and marks should be done at the four corners of the

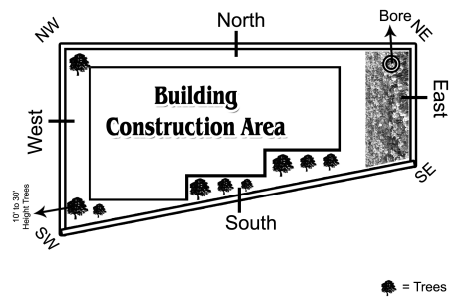

land and making the inauguration in the eastern side with 3 depth pit and 2 ft width pit on the day of inauguration with offering the 9 cereals chanting the vedic scriptures and by performing the poojas at that movement. If the pooja at the north east side is about an hour and that should be 30 minute of pooja in the south west corner. In this way all the poojas are to be performed and then only the construction should be started. There is a thing to be observed that the land is not according to the vaasthu the house has to be built as per the vaasthu principles. The kitchen should be in the south east, in the north east side should be a Hall, and in the north west side should be children bedroom, in the south west master bedroom , if it is possible the pooja room should be constructed in the corner of the north east side . If not possible a pooja room should be constructed in the corner of south east. All these things should be constructed according to the vaasthu. If the south west corner is increased in that increased area some 10 to 30 ft height trees should be fostered planting there. In that place light weight construction should not be performed. Car shed should not be established in that place. In the north east corner most the place should allotted for planting of plants of flowers. With these trees in that side will help to get rid of the evil effects of vaasthu. At the corner of south west a temple should not be constructed. If it is compulsory to build a temple in the corner of south west you have to get it registered in favour of others so that make it clear that there is no relation with that land and then only you can be constructed a temple in that place. When the south west corner is increased you have to keep idol of your favorite god in the north northern east side and perform the poojas for good results. The place of so much of vaasthu defects you should consult the best known Siddhanthi's suggestions as per the vaasthu principles house should be constructed and try to see most flower plants should be fostered around the empty place. In this way the house has been constructed you and your children will develop at their educations. And will become as a best example of ideal person among the others.

How to construct the buildings in the south west increased corner -2

A map showing the figure of increased corner in the south west-2

In the case of south west increased corner there are so many ways of building construction. With increased south west corner there should be evil effects. IN the cities any kind land should be purchased without thinking of vaasthu and making little changes as per the vaasthu building

construction are taking place and in this way people living that should not be effected with evil effects of vaasthu. Why because that as per the vaasthu no person can build house 100% correct according to the vaasthu. It is better to be adjusted construct the building in that place which we have bought. In this way of constructions you must consult with your Siddhanthi and engineer then only start the construction of building. The financial problems arose out of evil effects increased corner of south west are so many. At south southwest the building should be constructed with zigzag way. In this kind of constructions there should be followed the vaasthu rules inside the building. When the south south west side is increased it is compulsory to see the borewell should be at north northeast side. At the northeast corner a Tulasi plants should be kept for better results. The plants of flowers should be fostered in the eastern side. If it is possible some trees should be fostered around the building for good results. If it is not possible some flowers vases are to be kept over the building. At the same some flower plants should also be fostered in the building too. An interior plantation has to be fostered for better results. In this way most of evil effects of vaasthu should be cut down. The people living those houses will have mental peace, financial profits, business developments will improve in all the directions.

The vaasthu rules when the water flowing pounds are at east.

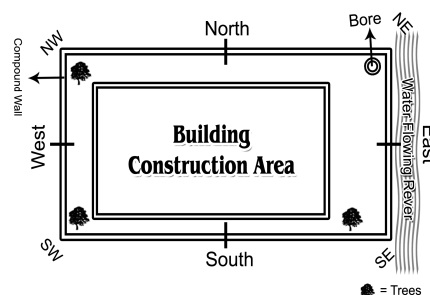

A map showing the figure when there are water pounds in the eastern side.

1. If there some flowing water pounds in the eastern side and flowing from north to south there should be some evil effects of vaasthu with those. At that position the water pound should be covered with some

trees and flower plants at eastern side and then the evil effects should be vanished.

The method is that there in the south west corner a low height wall over there. In this way the vaasthu has been changed the people living in that house will get peace of mind.

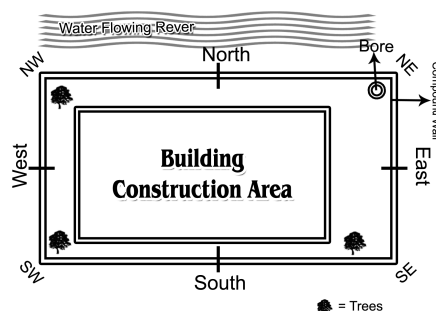

2. If there is small water pound flowing from south to north this is good. The people who lives beside that will have financial profits, enjoyments and will be flourished and can also their children settle abroad.

The water pounds flowing towards north east side and vaasthu.

A map showing the water pounds flowing towards north east side.

1. When the water pound flowing from towards northeast side and when it is flowing from east to west there should be some of evil effect as per the vaasthu. At this position those water pounds flowing in the northeast side some flower plants must be fostered for the better results. By this ways evil effects should be vanished. In this if there are so many evil effects according to vaasthu you should get it changed as per the vaasthu and construct your house.
2. If there are water plants in the northern east side flowing from west to east that is good of vaasthu . The people who live around that water flow can get financial benefits, and lead life with enjoyments . They will development their businesses and earned a good name.

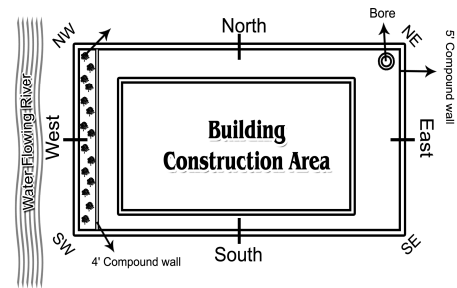

The water pounds flowing in the west and vaasthu.

A map showing the water pounds flowing in the west.

When there are water pounds flowing in the west these so much effect so we have to take precautions. If there are some water pound flowing in the west side the land of 2 to 4 fts must be kept set back and construct compound wall there and 10 to 30 ft heights trees must be fostered for

good results. Some of flower plants should be fostered. The compound wall constructed at in the west side in the west north corner of compound wall a small gate must be established for the protection of flower plants for better results. The used water of our house should be flown from the north to northwest side corner or towards the south east side corner. In this way some of small changes are to be done as per the vaasthu the people live in those houses can get political developments having helping nature to others , being pious with very thinking and their children will be improved at their education.

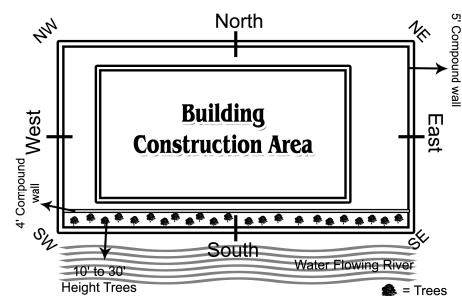

The water pounds flowing in the south side and vaasthu principles.

A map showing the figure of the water piles flowing in the west side.

It there are some water pounds flowing in the west when as per the vaasthu should be taken so much of precautions for better results. With these kind of water piles flowing in the west there are so many evil effects of vaasthu. With result ill-health, the children cannot progress in their educations , lack of talking power among the public and

like wise problems are there. At this position the water piles are in south side a set back of 5 ft must be left inside the compound wall. The trees of 10 to 30 ft height tree should be fostered for good results, and some flower plants are to be fostered for good results. In the south southeast side a small gate to be established and through that gate should be used for fostering. The leftover land in the eastern side your favorite god's idol should be kept and be offered poojas. The total used water should be go out from the

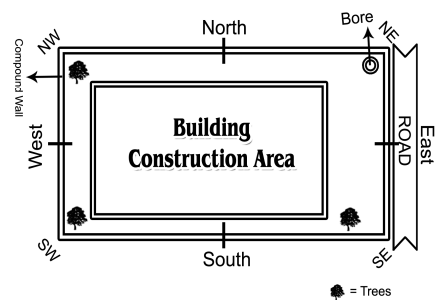

northern east side, or east, or north it is good for and if it is possible this water can be let out through the southeast side will give very good results. In this way some of the changes as per the vaasthu might be done with help of Siddhanthi and an engineer the people who live in these houses will get famous in their lives , get very promotions in their jobs, and will get financial profits in the future and there so much of the scope to develop in the businesses, the girls will have so much scope to get good alliances , and have good name and fame in the society.

The method of construction of houses facing east.

A map showing the method of construction of houses facing east.

If your land has the north road a borewell should be established in the east northeast. For example , the set back of 6 ft in the east side, 5 ft set back at North side, 4' 6" ft set back at west, and 4 ft set back in the south should be left. The building should be built in between

these set backs. Hall should be in the east northeast, a kitchen in the south east, children bedroom in west north side, master bedroom at west south side, and the pooja room should be constructed adjacent to the kitchen in the east southeast side. If

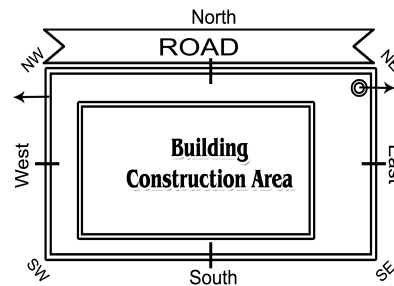

there is road in the east the main gate should be established in the eastern northeast side. The simhadwar should be at eastern northeast side compound wall. If for the suggestion the simhadwar should have to establish in the north side that should be northern east north side. Whatever the size of the simhadwar the remaining threshold should be less of atleast one inch. If there is road in the east , there should be two threshold one in the east northern east, and other in the northern east north side. And every room has a threshold at the side corner of northern east side. The kitchen threshold should be built as per your convenience. In this way the house is built the people live will have peaceful lives, wealth, health, and business development to utmost.

The method of construction of houses in the lands with road at north side.

A map showing how to build house with the north road.

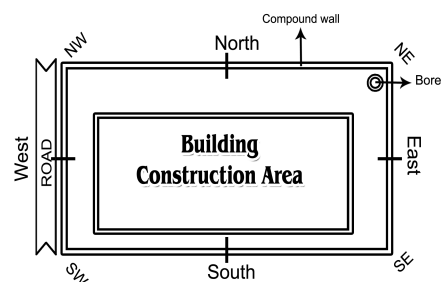

If there is a road at north of your land you should have to establish borewell in the eastern northeast corner. For example , the set back of 6 ft in the east side, 5 ft set back at North side, 4' ft set back at west, and 4 ft set back in the south should be left. The building should be built in between these set backs. Hall should be in the east northeast, a kitchen in the south east, children bedroom in west north side, master bedroom at west south side, and the pooja room should be constructed adjacent to the kitchen in the east southeast side. If there is road in the east the main gate should be established in the eastern northeast side. The simhadwar should be at eastern northeast side compound wall. If for the suggestion the simhadwar should have to establish in the east side that should be northern east north side. Whatever the size of the simhadwar the remaining threshold should be less of atleast one inch. If there is road in the east , there should be two threshold one in the east northern east, and other in the northern east north side. And every room has a threshold at the side corner of northern east side. The kitchen threshold should be built as per your convenience. Some of flower plants should be fostered in the empty land. These are also a part of vaasthu. In this way the house is built the people live will have peaceful lives, wealth, health, and children will progress in their educations, can develop as political leaders in the future.

The method of construction of house in the lands with west side road.

A map showing the method of construction of houses with west side roads.

If your land has the west side road a borewell should be established in the east northeast. For example , the set back of 10

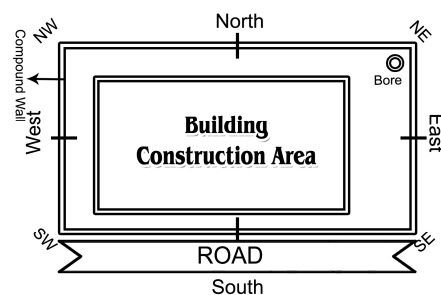

ft in the east side, 5 ft set back at North side, 4' 6" ft set back at west, and 4 ft set back in the south should be left. The building should be built in between these set backs. Hall should be in the east northeast, a kitchen in the south east, children bedroom in west north side, master bedroom at west south side, and the pooja room should be constructed adjacent to the kitchen in the east southeast side. If there is road in the west the main gate should be established in the south eastern south side. The simhadwar should be at eastern northeast side compound wall. If for the suggestion the simhadwar should have to establish in the north side that should be northern east north side. Whatever the size of the simhadwar the remaining threshold should be less of atleast one inch. If there is road in the east , there should be two threshold one in the east northern east, and other in the northern east north side. And every room has a threshold at the side corner of northern east side. The kitchen threshold should be built as per your convenience. In this way the house is built the people live will have peaceful lives, wealth, health, and business development to utmost in the state and central politics.

The method of construction of houses in the lands with road at south side.

A map showing how to build house with the south road.

If there is a road at south of your land you should have to establish borewell in the eastern northeast corner. For example , the set back of 10 ft in the east side, 5 ft set back at North side, 4' 6" ft set back at west, and 4 ft set back in the south should be left.

The building should be built in between these set backs. Hall should be in the east northeast, a kitchen in the south east, children bedroom in west north side, master bedroom at west south side, and the pooja room should be constructed adjacent to the kitchen in the east southeast side. If there is road in the south the main gate should be established in the south

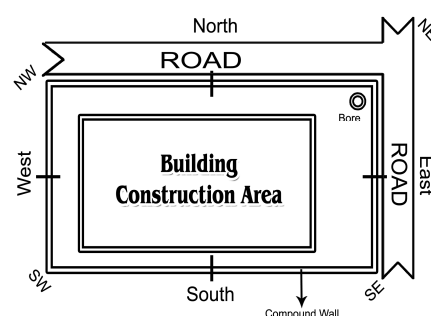

southeast side. The simhadwar should be at eastern northeast side compound wall. If for the suggestion the simhadwar should have to establish in the east side that should be northern east north side. Whatever the size of the simhadwar the remaining threshold should be less of atleast one inch. If there is road in the east , there should be two threshold one in the east northern east, and other in the northern east north side. And every room has a threshold at the side corner of northern east side. The kitchen threshold should be built as per your convenience. Some of flower plants should be fostered in the empty land. These are also a part of vaasthu. In this way the house is built the people live will have peaceful lives, wealth, health, and children will progress in their educations, can be developed have promotions in their jobs and earn good name among the society and children will be successful in the future.

The method of construction of houses in the lands with road at eastern north side.

A map showing how to build house with the eastern north road.

If there is a road at eastern north of your land you should have to establish borewell in the eastern northeast corner. For example , the set back of 10 ft in the east side, 5 ft set back at North side, 4' 6" ft set back at west, and 4 ft set back in the south should be left. The building should be built in between these set backs. Hall should be in the east northeast, a kitchen in the south east, children bedroom in west north side, master bedroom at west south side, and the pooja room should be constructed adjacent to the kitchen in the east southeast side. If there is road in the south the main gate should be established in the south southeast side. In every room the way in the east or north northeast corner. The simhadwar should be at eastern northeast side compound wall. If for the suggestion the simhadwar should have to establish in the east side that should be northern east north side. Whatever

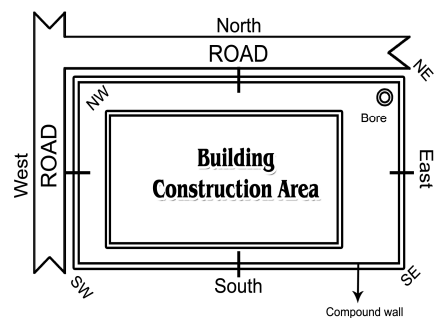

the size of the simhadwar the remaining threshold should be less of atleast one inch. If there is road in the east , there should be two threshold one in the east northern east, and other in the northern east north side. And every room has a threshold at the side corner of northern east side. The kitchen threshold should be built as per your convenience. Some of flower plants should be fostered in the empty land. These are also a part of vaasthu. In this way the house is built the people live will have peaceful lives, with wealth, health, and develop in the state and central politics becoming political leaders as MLA, and MPs. That why the political leaders would like to buy the lands with eastern northeast roads. In this kind of lands vaasthu will be powerful. The people in this kind of lands their children will progress in their educations and get good jobs in the foreign countries and settle abroad.

The method of construction of houses in the lands with road at western north side.

A map showing how to build house with the western north road.

If there is a road at western north of your land you should have to establish borewell in the eastern northeast corner. For example , the set back of 6 ft in the east side, 5 ft set back at North side, 4' 6" ft set

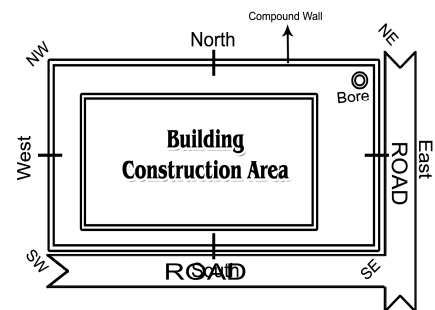

back at west, and 4 ft set back in the south should be left. The building should be built in between these set backs. Hall should be in the east northeast, a kitchen in the south east, children bedroom in west north side, master bedroom at west south side, and the pooja room should be constructed adjacent to the kitchen in the east southeast side. If there is road in the western north side the main gate should be established in the northeast side of the wall. In every room the way in the east or north northeast corner. The simhadwar should be at eastern northeast side compound wall. Whatever the size of the simhadwar the remaining threshold should be less of atleast one inch. And every room has a threshold at the side corner of northern east side. The kitchen threshold

should be built as per your convenience. Some of flower plants should be fostered in the empty land. These are also a part of vaasthu. In this way the house is built the people live will have peaceful lives, with wealth, health, and develop in the state and central politics becoming political leader. In this kind of lands vaasthu will be powerful. The people in this kind of lands their children will progress in their educations and get good alliances from the foreign countries and settle abroad.

The method of construction of houses in the lands with road at southeast side.

A map showing how to build house with the southeast road.

If there is a road at southeast of your land you should have to establish borewell in the eastern northeast corner. For example, the set back of 6 ft in the east side, 5 ft set back at North side, 4' 6" ft set back at west, and 4 ft set back in the south should be left. The building should be built in between these set backs. Hall should be in the east northeast, a kitchen in the south east, children bedroom in west north side, master bedroom at west south side, and the pooja room should be constructed adjacent to the kitchen in the east southeast side. If there is road in the south the main gate should be established in the south southeast side. The simhadwar should be at eastern northeast side compound wall. If for the suggestion the simhadwar should have to establish in the east side that should be northern east north side. Whatever the size of the simhadwar the remaining threshold should be less of atleast one inch. If there is road in the east, there should be two threshold one in the east northern east, and other in the northern east north side. And every room has a threshold at the side corner of northern east side. The kitchen threshold should be built as per your convenience. Some of flower plants should be fostered in the empty land. These are also a part of vaasthu. In this way the house is built the people live will have peaceful lives, wealth, health, and children will progress in their educations, can be developed have promotions in their jobs and

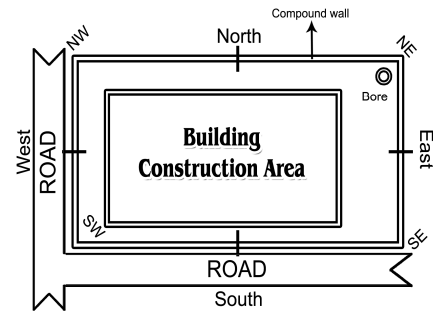

earn good name among the society and children will be successful in the future. Girls will get good alliances.

The method of construction of houses in the lands with road at southwest side.

A map showing how to build house with the southwest road.

If there is a road at southwest of your land you should have to establish borewell in the eastern northeast corner. For example, the set back of 10 ft in the east side, 5 ft set back at North side, 4' 6" ft set back at west, and 4 ft set back in the south should be left.

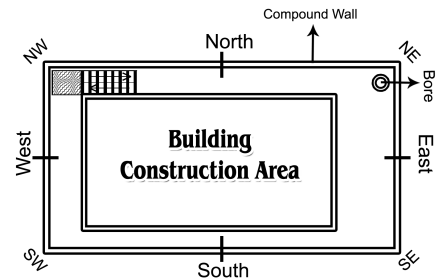

The building should be built in between these set backs. Hall should be in the east northeast, a kitchen in the south east, children bedroom in west north side, master bedroom at west south side, and the pooja room should be constructed adjacent to the kitchen in the east southeast side. If there is road in the south the main gate should be established in the south southeast side. The simhadwar should be at eastern northeast side compound wall. If for the suggestion the simhadwar should have to establish in the east side that should be northern east north side. Whatever the size of the simhadwar the remaining threshold should be less of atleast one inch. If there is road in the east, there should be two threshold one in the east northern east, and other in the northern east north side. And every room has a threshold at the side corner of northern east side. The kitchen threshold should be built as per your convenience. Some of flower plants should be fostered in the empty land. These are also a part of vaasthu. In this way the house is built the people live will have peaceful good lives, if there is anything doubtful about evil omens just recognizing them you must consult a Siddhanthi and get the vaasthu corrected. After got correction of vaasthu people who in this houses will be profitable all the way. Female child will have good omens at the engagements.

The method of establishing staircase in north northwest.

A map showing the figure establishment of staircase in the north northwest.

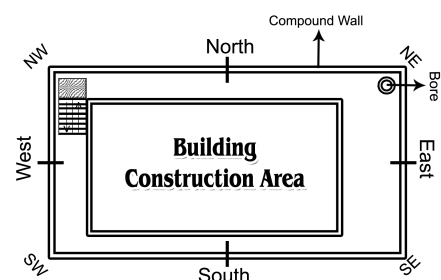

If there is road in the north side simhadwar should be kept and the staircase should be kept at northern east side. When constructing this staircase we should try that the staircase should not touch the north side compound wall and western compound wall. The construction like this is better one. If the first floor has been built walking should be from the north balcony towards west keeping the Simhadwar in the northeast side. At the south east side kitchen and adjacent to kitchen a pooja room have to be built. The staircase should be build in the northern east side. If in this way the staircase is not established house the people live in those houses will have to face so many troubles. The staircase established in northeast side that there are so many benefits , like good health, development in Businesses and so like.

- Many of people will doubt the foreign and country vaasthu, but we have to recognize at first in whichever country we are and then we should follow the vaasthu of that country and state.
- To believe in the vaasthu is one thing but to become a great person is a greater than to that.
- Whoever respect their parents are equal to offer pooja to the God.
- Whoever accept the troubles with smile can win everything in his life.

The method of establishing staircase in western northwest .

A map showing the figure establishment of staircase in the western northwest.

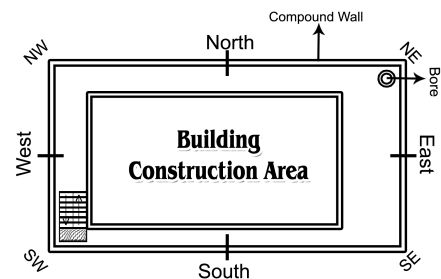

If there is road in the western northwest side simhadwar should be kept and the staircase should be kept at northwest western side. When constructing this staircase we should try that the staircase should not touch the north side compound wall and western compound wall. The construction like this is better one. If the first floor has been built if there place big the staircase should be kept in west northwest side and the Simhadwar should be kept in the northwest side. At the south east side kitchen and a pooja room have to be built eastern northeast side . If in this way the staircase is established house the people live in those houses will get so many benefits , like good health, and children will develop in their education.

The method of establishing staircase in western southwest .

A map showing the figure establishment of staircase in the western southwest.

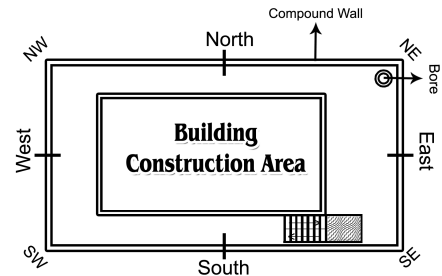

If there is road in the northwest side simhadwar should be kept and the staircase should be kept at southwest western side. When constructing this staircase we should try that the staircase should not touch the north side compound wall and southern compound wall. The construction like this is better one. If the first floor has been built if there place big the staircase should be kept in west southwest side corner and a petty wall should be built over the building. The Simhadwar should be kept in the northwest side and pooja room in the east northeast side. At the south east side kitchen should be built. In this way the staircase is established house the people live in those houses will get so many benefits all the way.

The method of establishing staircase in south southeast.

A map showing the figure establishment of staircase in the southern southeast.

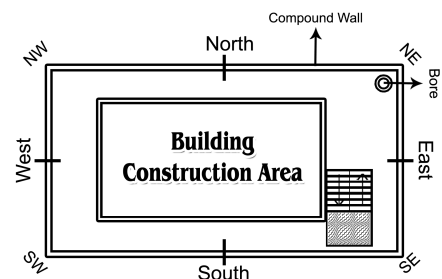

If there is road in the southern southeast side simhadwar should be kept and the staircase should be kept at southeast southern side. When constructing this staircase we should try that the staircase should not touch the south side compound wall and east compound wall. The construction like this is better one. If the first floor has been built the staircase south southeast side should be kept and pooja room should be built in the eastern northeast. At the south east side kitchen should be built. In this way the staircase is established house the people live in those houses will get so many benefits all the way.

The method of establishing staircase in eastern southeast.

A map showing the figure establishment of staircase in the eastern southeast.

If there is road in the eastern northeast side simhadwar should be kept and the staircase should be kept at eastern southeast side. When constructing this staircase we should try that the staircase should not touch the south side compound wall and east compound wall. The construction like this is better one. If the first floor has been built the staircase eastern northeast side should be kept and pooja room should be built in the eastern northeast. At the south east side kitchen should be built. In this way the staircase is established house the people live in those houses will get so many benefits all the way.

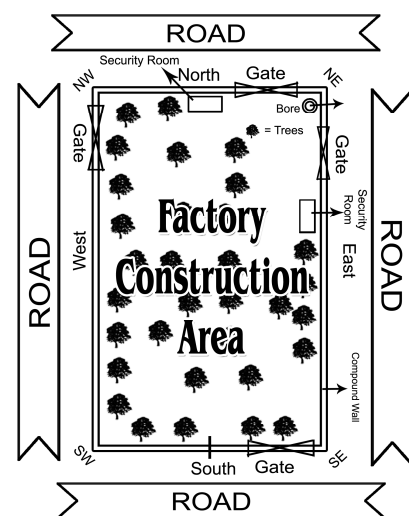

The precautions have to be taken when purchasing the crop lands.

Before to purchase the crop lands every body has to follow some precautions. When buying the field the northeast corner should be down, the south west corner should be up, and that there are some hills and all the corners are different in heights are common to all the fields. Before to purchasing a field you can observe a things by standing before that field some flash can be found in that field. We should buy those kind of fields. When the purchasing a field you should consult a Siddhanthi for suggestion and follow the as he said by. If possible after buying the field we should level the up and downs equal and we can crop the fields. To be frank the vaasthu does not be followed in case fields. When there are some Palm trees around the field because there is heavy weights in the eastern northeast we should not cut down the trees in the east. Around the fields the used to buy ancestors for the purpose of limits laid. That's why there should be found no difference whether to cut those palm trees or not. When the establishment of borewell you should consult the Geologist for confirming that where the water best available and bore should be made. If it needed it is no wrong to make a borewell in the northern east side because we should not to follow the vaasthu concerning the water. No road stroke will affect the fields.

The method of keeping the Gates for the factories according to Vaasthu.

A map showing the figure of as how to keep Gates in the factories.

If there is east road starting the construction in the corner of northern east side and administrative building should be constructed in the western northwest side and the main big gate should be kept in the eastern northeast side and after that a small gate should be kept. A security Guard can be built beside the small gate. When there is

road in the east by keeping the main Gate in the eastern northeast side of the factory and can develop good earnings.

If there north road starting the construction in the corner of northern east side and administrative building should be constructed in the western northwest side and the main big gate should be kept in the eastern northeast side and after that a small gate should be kept. A security Guard can be built beside the small gate. When there is road in the north by keeping the main Gate in the eastern northeast side of the factory and can develop wealthful earnings.

If there is road in the west , starting the construction in the corner of northern east side and administrative building should be constructed in the western northwest side and the main big gate should be kept in the western northwest side and after that a small gate should be kept. A security Guard can be built beside the small gate. When there is road in the west by keeping the main Gate in the northwest side of the factory and there should be borewell in the eastern northeast side and if not being done borewell there a sump should be established at northeast corner and water should be used as drinking water. In this way all the vaasthu evil effects can be decreased and the factory can be useful for many people and will be developed with wealthy earnings.

If there is road in the south , starting the construction in the corner of northern east side and administrative building should be constructed in the western northwest side and the main big gate should be kept in the south southeast side and after that a small gate should be kept. A security Guard can be built beside the small gate. When there is road in the south you should buy some land in front of factory in the east from others at least 10 ft land and make it a road. And by keeping the small Gate in the eastern northeast and the prominent engineers should be entered through that gate. And a gate should be kept in the south southeast side of the factory for the transport facility and there should be borewell or well in the

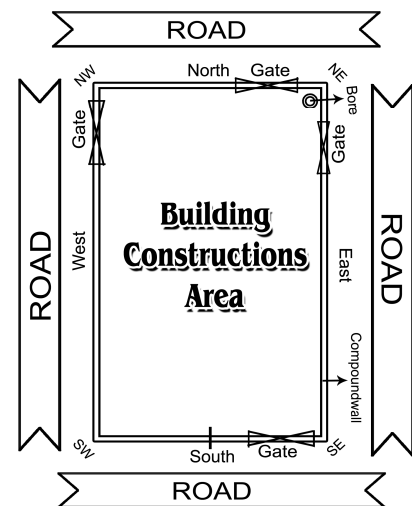

eastern northeast side and if not being done borewell there a sump should be established at northeast corner and water should be used as drinking water. In this way all the vaasthu evil effects can be decreased and the factory can be useful for many people and will be developed with wealthy earnings.

- Road strokes do not affect the factories.
- Factory Borewell can be established at all sides leaving only the southwest corner.
- Even though that there are some vaasthu evil effects but with smaller changes can be developed.
- All the superstitions like animal sacrifices, Talismans, Witchcrafts, magic, Black magic, should not be believed.
- When the factory management will take care of the company workers the factory should be the path of development.

A man who has adopted the human values in their lives and forward in the successful way with good choosing the ways he is the true vaasthu man.

The method of establishing the gates to the compound walls.

All the people will make some mistakes while establishing the gates to the compound walls. By the way there should be many kind of evil effects of vaasthu which leads to the bad positions and then only they come to know this. According to the vaasthu keeping the compound wall gate is also a main thing. That's why when the compound wall gates are being established that must be followed the Siddhanthi's suggestions and engineers as to how height should be built and it better to do follow their suggestions.

If there is east road a gate can be kept in the east northeast side. If it is not possible to keep the gate in the east northeast side a gate should be established in between the eastern southeast and northeast.

If there is north road a gate can be kept in the northern northeast side. If it is not possible to keep the gate in the north northeast side a gate should be established in between the northern northwest and northern northeast.

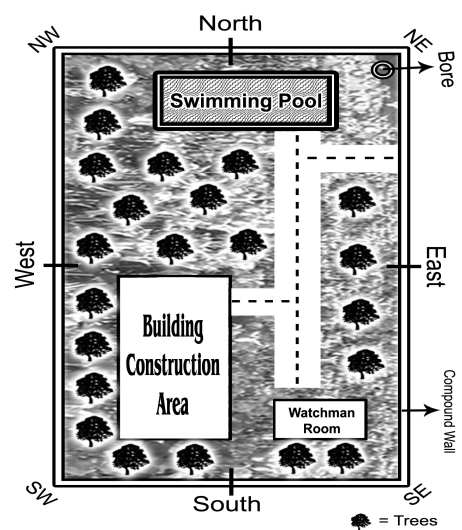

If there is west road a gate can be kept in the western western north side. If it is not possible to keep the gate in the western western north side a gate should be established in between the western southwest and northern northwest.

If there is south road a gate can be kept in the southern southeast side. If it is not possible to keep the gate in the southern southeast north side a gate should be established in between the southwest and south southeast.

The method of construction of Guest House at fields.

A map showing the construction of Guest House at field.

Most of the wealthy persons will go their field with their family and children for outing and for amusement. And they enjoy the outing at Guest houses at fields with their friends. The guest houses should be built as per the vaasthu principles. Why because we build the guest houses with our name for amusement. Therefore the guest houses should be built 100% vaasthu and it is easy to build guest house at field.

The method of constructing the Guest house.

It does not matter wherever a road in your field a guest house should be built at south west side. A simhadwar should be constructed in the east side, or north or the side which is good as per your name coming to know that and construct the simhadwar at that side. And in that house a pooja room must be in the east northeast side, a hall should be built in the

eastern northeast side, a kitchen in the south east side, a children bedroom in the western north side, and a master bedroom in the southwest side and the inside and outside area should be adorned according to vaasthu the guest house should be constructed and the out of the guest house some of flower plants should be fostered in the east and some big trees are to be fostered in the south side and many plants and grass plants should be fostered in the north side and make it a lawn. The bore should be in the eastern northeast side. When the guest house is built in the south west side of the field and wanted to construct a swimming pool in the east or in the north a swimming pool should be built at the corner of eastern northeast side just away from the guest house. You should not build a guest house as there is ample place in your field. If you do so the people who live in that guest houses will have to go losses in their businesses and suffer mental tensions and there should be some obstruction in the children educations and so on so many troubles have to be faced. After building the guest house must and should offer poojas twice a year cleaning inside and out the guest house. The guest house should be used as per the traditional for the own house with relatives for amusements for good results. In the guest some light should be kept at every time always in the night even though nobody is staying in that guest house. If not so a light is not there in the night some devils will enter that house. There should be kept some white flag over that guest house at the southwest side corner and black and red color like different color flags should not be kept at over the guest house. Around the guest house coconut trees, banana trees must be fostered and some vegetable plants should be fostered inside the compound of the guest house if possible and cows, calves, goats, sheep, and like some domestic animals must be fostered in the compound of the guest house that can be decorated with colorfully, and some luck should come over there. As per the vaasthu you have built the guest house you may get delight and development in the business with partnerships with friends will be improved, your children will develop many new businesses and improve in that.

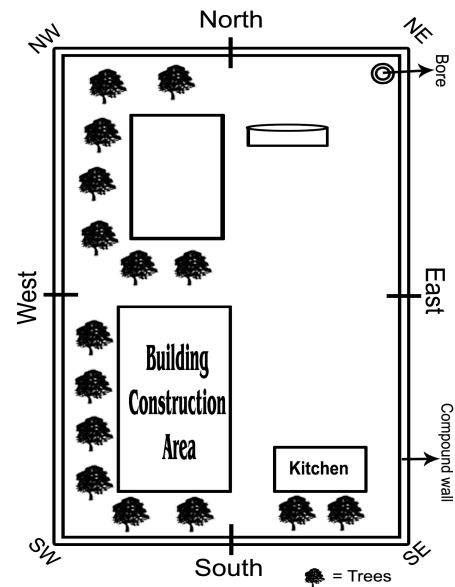

The method of construction of houses in villages.

A map showing that the method of construction of houses in villages.

When construction of houses in the villages some of the vaasthu principles must have to be followed. In villages there should be very spacious lands hence they construct the houses very spaciously individually a kitchen room, toilets, and the sheds for livestock far away from the houses all these can be built inside the compound wall.

When the construction of the houses a Siddhanthi must be consulted for his suggestions as how to build the house according to the vaasthu the house should be built at northeast side. The kitchen should be built in the southeast. The livestock shed

should be established at the corner of northwest side. There are some precautions in order to construct the livestock shed. When constructing the livestock shed the roof should be in the east or in the north side the should be built. In the west the compound wall should not touch the north compound wall and the most of the construction should be at western northwest side. If you want to build the slab over the livestock shed the slab of the livestock slab should be less height than that. And or the shed has to be built slab of building the shed's slab should be one ft less height. Length and width of the construction there are no restrictions about. Most of the people should not follow any rules while constructing the livestock sheds and in this way they will face so many troubles suffering from the diseases resulting deaths. And the same way the people living in that houses will have to face financial problems and will result in the losses of crops. The shed of the livestock should be built with the vaasthu the development should be in progress day by day with the profits and the people will gain the name and fame. According to the vaasthu the shed is built with precautions will good results. A kitchen should be in the southeast side, and the south compound wall should not the east side compound wall the kitchen should be built for get good results.

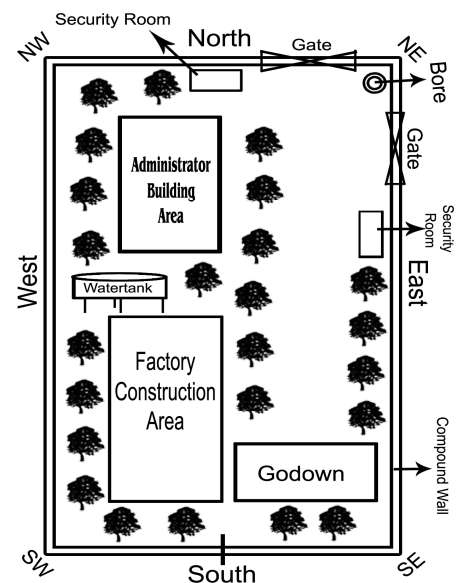

The kitchen slab can be established that must be one ft over the building or any other new height should be built. If the kitchen is built with the iron sheets shed it should be built one foot less height in the south side of and in the north side down the shed should be built. In this way the constructions should be made in the villages.

The tub of the livestock must be kept in the north east as much as possible or north northeast side. In villages that there are some big mortars for pounding grains in the houses of headpersons that should be kept in the northwest or in the southeast side. A small mortar can be kept anywhere in the house. In the east in the empty land some flower plants should be fostered south west side and some good fruit trees should be fostered in the corner of southwest side. In the house the other thresholds should be less height than the Simhadwar. In the same way the compound wall gate should be kept more than the height. In this way the house is constructed as per the vaasthu they can gain very good name and fame in the village and stand advance than others. Your children will have very future with developments.

The methods of constructing the factory according to the vaasthu.

A map showing the construction of factory as per the vaasthu.

Today most of the people are developing the from the low stage to higher levels. Having reached to the levels and with some reasons they have gone to down stages then they will suffer so much of mental and physical tensions. Because we should know all these things before hand and take precaution measures while constructing the factory and try to be as much as possible that construction should be according to the vaasthu. Once was built we should not reconstruct the factory dismantling it. Why because it was built spending with so much

money and energy because of this you should consult a Siddhanthi taking the design for suggestions and to consult with a engineer before starting the construction of factory. The factories are to be constructed according to the vaasthu from 50 % to 70% for our convenience. We should not follow the 100% vaasthu when construction of the factory. That is why we have to see that construction the factory atleast 50% as per the vaasthu. In the ancient days some of the factories have built the factories and performed their businesses. After that the vaasthu science has come light later on they came to know the fact that they are facing losses because of that their factories are not according to the vaasthu and started corrections to their factories. The superstitions which are against to the vaasthu science they had get rid of those and made smaller changes as per the vaasthu in the compound of their factories. In this way reconstruction of the factories they have turned to the profitable way in their businesses. Hence, the factory owners should understand this and grow in their businesses.

The methods of constructing the factory according to the vaasthu.

While constructing the factory the land should be made that the northeast to be down, the southwest just above the land have to be leveled. If there is hill in the northern east corner the factory should be built in southwest corner and an office room should be built on the hill at northeast corner. In the southeast a godown should be built. In the western northwest an administration building should be built. In between the northwest and west south a water tank should be built. If it is possible there can be kept a gate in the northeast north side. Nearby the gate a security guard room should be built. Inside the compound wall some big trees should be fostered. And as much as possible flower plants should be fostered in the compound wall in the administration building an interior plantations should be established. Some people used to offer sacrifices of animals in the factories before the construction of factories. But all have to observe there something that the sacrifice of the animals will not help to develop their businesses at all and these are simply superstitions and these are being followed by the educate fools. Therefore we should not follow these superstitions and develop in our businesses will get any profits in crores and

it is not possible to stand at first among the others. These are only the superstitions. We should get rid of all these superstitions and make changes in the company compound as per the vaasthu rules and become progressed in the businesses. One should build the factory with good conduct and can become good owner in the future. In this if someone wants to develop in their businesses must and should follow all the rules in order to progress. First of all a pit of inauguration should be made in the northern east side and after the inauguration the construction of the factory shall be started construction work In the western south side the markings must be made in that area and first column should be in the northern east side and at the same spot the inaugurations pit should be made and that should be less depth of the inauguration pit and offer the poojas in the same day with difference of half an hour. And with prayer of your favorite god and celebrate it. At the time of inauguration the owners of the factory should offer concerned workers and engineer with some sweets and fruits and after that a food offering programme should be held. And after that the owners of the factory will have to take blessings of the elders and offer the clothes to them and spend the happy time with them. The approvals of the factory whichever the needed for that like the bank loans should be completed without interruption, And within the 6 months period all the factory works will be completed. All the workers who work for the construction of factory should be offered food and if possible the workers should be offered with clothes and make them happy that way and appreciate the working engineer and go forwards with clear mind. Once started the factory should not think about the vaasthu again. Only think of the ways of benefits of company.

- By keeping the jealousy, hatred away and keeping the patience, donation are followed the man can be called the vaasthu man.
- In the apartment in the common area interior plantation flower vases should be kept for the best results.

Our own vaasthu and Foreign Vaasthu.

In our country most of the people are following the different Vaasthu making studies are going forward. For example some Siddhanthi may say

that the Andhra vaasthu is better, and another Siddhanthi say that the Vaasthu of the other sates are good to be followed. At the same way some of the foreign countries vasru books are being imported in to our country are being translated into our languages and are available for us in the market. These are also followed by the our country persons. Leaving the country vaasthu aside the foreign vaasthu is being followed by the people of our country we have to observe the facts that what are the benefits are coming out of these foreign vaasthu. Making the smaller changes in the foreign vaasthu books are made. For example the foreign vaasthu expert Calling Bell , Hall some of the small sounds the article of magics , the bathroom door in the Hall should not be opposite to each other and there should not be a door in between the kitchen and bedroom and so like there are so many type of theories are there to follow. But we have to observe the some of the other things it is better to follow the foreign vaasthu when we are in the foreign country. For example our constitutions is different from the forign countries and accordingly the rules and regulations are different at the same way if we behave according to the their rules and we can live there. But it is impossible to follow our rules and regulation the foreign country. At the same way the vaasthu of that country should be different from the ours one. But if we try to follow the foreign rules by reading the books so many of the vaasthu books it can not be clear which vaasthu has to be followed we will get confused. There is some thing to follow all of us. As all of us know that the kitchen should be established in the southeast side , master bedroom in the southwest, the children bedroom in the northwest side, the hall should be in the northeast side, the pooja room as is the simple way we should live constructing the building. We should not follow the meaning less books we should not fall into troubles. We should follow the suggestions of Siddhanthi and build our buildings.

Vaasthu- Workers and Entering into the house.

Most of the people construct the houses according to the vaasthu. As this way that they thinking that will not affect anything we should not give less payments to the workers, engineers , tapi mistry, labours , the building

drawing engineer, are not properly paid making wrong accounts and without respecting them you should not get good omens that way. In this way whoever does so will not progress to what much extent they have followed the rules you might have to suffer from the many evil effects. That's why people who have built the new houses must should with their children and wife and family when entering into the house you must and should make them happy giving them food and clothes with respect as your own child. And at the time of construction you should give facilities like giving them tea before 10.00 am and a meals at afternoon and in the evening a tea looking them as your own relatives and when you have done like this the smaller evil effects should not affect you at all if any. For example at time of construction of huts with straws and palm leaves too they used to give respect the workers offering the tea early in the mornings at 9.00 am they used to give curd and pickles rice to them and at the afternoon they have given the very good meals to them and in the evening after the completion of the work the owner used to satisfy the workers and give the money whichever is due to them saying enjoy as you like. The labour who built that house will enjoy as they have built their own house with delight and with amusement they have completed construction of that house. In this way the labour are felt happy about their work the people who lives in that house will live with utmost happiness as long as they live in that house.

Vaasthu- Respect.

As we have to have visited the vaasthu pandits and made the construction of our house as per the vaasthu and having sit finger crossed it is that we could not become rich but also we can be lost our wealth whichever the we have already. But for the fact the vaasthu is an idea only. Keeping that in our mind knowing there we are and following the vaasthu rules are there should be given the respect. Many of the people many things about the vaasthu and you have to listen to them unavoidably and with so many thoughts in your mind you should not thing of the many a poojas and performing them forgetting your family you should not make away to your kin and kith. You should have to take the vaasthu into consideration as much as you need it

and after that you have to forget it for good and abide to the your occupation and work hard for your development with righteousness and then you will be called the real vaasthu person.

The main features of Vaasthu man :

Most of the people are of the idea that vaasthu is only for house, shop and factories only. But for the fact the vaasthu is for the house and the owner of the house must have the vaasthu ideas and these features those persons will be successful in their lives. The persons of this kind can become a politician within short period and can become a minister in which the state he stays or otherwise atleast a main leader in the region. A person of that qualities has established a factory can also get so much of benefits in that business and can provide livelihood for so many unemployed people. There is one which must be observed by all of you. What much the vaasthu person is rich he must give the donation of food to the poor performing Annadana programme at least once in a year. You can see these in this here and there. You may think that he is doing annadana because of he has sufficient money. But for the fact as much as you have wealth must have the thought of endowment. In this way such person with thought of endowment he can be called vaasthu person and hence every person has to know all these things and it is better to know vaasthu is good for us.

The main features of Vaasthu man must have.

- To give good direction to behave.
- To help others.
- To behave to be convenient to others.
- To recognize the hard work of the persons who worked for them should be helped in some way.
- Without showing any discrimination of caste and religion teach others with good behaviour.
- The person of vaasthu should be respected by all.
- The who can win over successful whatever troubles come to him.
- The person who give respect to his parents , brothers and sisters and wife and children.

- Person who becomes as social worker in the society.
- Person who got name and fame in community.

You are also vaasthu men.

In this way you all have to be changed as vaasthu persons and stand as example to those believed in you and the community which is around you and become best ideal for all. Then you can be called as a vaasthu person. You might be wondered that the vaasthu for house and but not for the man, you may wonder? It is true that as much as the house needs vaasthu the same way man needs it. Therefore you should have taken some precautions needed you should do the best for the people as a good example of man.

Old Buildings Partitions- Vaasthu.

In the ancient day the houses and properties were not divided for some generations. Why because of that they have respected their elders and protected their forerunners properties. But now a days the villages are becoming cities and the prices of properties had been hiked in the last two generations of as the result of this the properties are being divided by the sons that small son should be at east , and second person should have the middle portion and third person should get southern portion and so on the divisions of properties being done and in this way there are occurring some vaasthu defects. Still we can change these defects with smaller changes as per the vaasthu. As there is a wall in front of wall should be thought of mistake with the scanty of knowledge they are making a lot of money waste on dismantling the front walls in order to increase the eastern northeast side they are making the lots of money waste. But for the fact the front wall of should not be dismantled you may make some changes in the house as per the vaasthu. After some later all the partners should dismantle the old building altogether and divide the empty land and you may construct the houses individually. But immediately after the division of property you should not waste money with name of vaasthu. On the partition day all have to make small changes in their divisions with some vaasthu and painting the

building inside and changing the flooring with new one as per our choice for the new look your building can be as per the vaasthu then.

Women in the family on their birth day, or on their marriage days should give some clothes to the poor, and pray for their favorite gods and they have the position should endow the poor with food, that they will get prolonged life.

Apartments purchasers and precautions as Vaasthu.

When you buy an apartment you should have to know which facing is good for you according to your name and should buy that facing flat for good results. The purchasers when they purchase the houses they should go forward only keeping in their minds the facing only. But it is not all, the children bedroom, the pooja room, and all the things should be at correct vaasthu positions. Most the people having bought flats in the apartment without consulting the vaasthu Siddhanthi and engineers and after that they came to know by the way some Siddhanthi and then only they rush to the Siddhanthis and engineers for suggestions. Then the Siddhanthi comes to their and observes that there something non vaasthu in their house. And for the correction of these mistakes a huge amount should be spent for those corrections. The Siddhanthi should give suggestions in order to get good results asked to remove some of the wall in that building and should be loss to the builder and or the owner should not adjust with that without correction of vaasthu. In this conditions some of Siddhanthis should have taken some stern decisions. And some of other Siddhanthis will find out some ready made way outs. But for the owner should have to believe the vaasthu you should have to consulted in advance. Or otherwise after the completion of construction of building you have not care at all. The kitchen should be in the east mostly, or in the north northwest should be better. If it is not possible the south southeast or north northwest can also be good for kitchen then the kitchen platform should be established towards east. The person who cooks should be facing towards east only. For the toilets in the apartments no need of thinking about vaasthu for those toilets. But the toilets should be in the eastern northeast side.

The remaining of the three corners can be established toilets. And as per the Hall, dining there are no certain rules of vaasthu in the apartments. But the Hall, dining hall should be in the eastern northeast , southeast and northwest side corner is ideal for those to be established.

The children bed room must be constructed in the eastern northeast side or south west side or southeast side. The children bed room should be in the northern west side for good results. The master bed room should be in the southwest side and if it is not possible that can be constructed in the northwest side. Because of northwest there should be ample air and light can be available.

Flowers way and nails way of Vaasthu:

Most of the people who have been enjoying their ancestral property and developed their share of properties and made the property of 10 rupees had been made 100 rupees. And some of others have made the 100 rupees their forefathers' property reduced to be 10 rupees. Some others who have no knowledge of business skills and living with love and affections lived under the shade of their forefathers could not understood evolutions in the society have been vanished with their forefathers with learning some bad habits they have lost their properties against to develop that property and ended up outright. And at the end saying as it is a fate they earnestly try to consult with vaasthu Siddhanthis and astrologists by abortively attempts get back the old golden days, that there should be left over with 10 rupees of property out of 100 rupees. As performing the poojas, and changes as per the vaasthu that he may get back the grandfather's property like questions should be arised and with that notion he will consult with so many Siddhanthis and think of that he should practice their suggestions for good results. But for the fact to gain property poojas will not be only the main thing. The vaasthu changes the poor person will not become a millionaire. First of all man has to be changed. What is that should be know how of the society to be behaved and get know the skills in the business and by investing the huge capitals in the business and work hard day and night will regain the lost old position and get gain 10 times more of the property which is now.

Although having done with smaller changes according to the vaasthu and never ever rush for which is not and not going against to the society and having improved the helpful nature, mercy, and humanity and all of that type good qualities in their minds and continue forward no body can expect such a person will developed whichever the way. The who born in the way of flowers and some time later will have to go through the way of nails and for some later he can be adjusted with that suitable to the society and after some he may be in the flowerish way. From the flowerish way to nails way and getting the main theme of these two ways positions can also grow upto the flowerish way of living.

E. For every festival must and should be endowed to the poor, that should be food than to money for good results.

In our country there are so many religions, it is not compulsory to pray these religions but respect them should get the good results.

Vaasthu compulsory for huts and even for the God too.

In the old days the people have the idea of vaasthu but there not many people to teach them the vaasthu. Because of this reason the Idea of vaasthu has come to light very lately. Now a days the vaasthu that there are so many vaasthu Siddhanthis in the cities and villages too and there are some books are available to buy. Hence every should have knowloedge of vaasthu so that they respect the vaasthu following its rules. With the vaasthu rules there should be ample light and air in the house the people who live in that house shall have health, without complaints. Having with perfect health can also work deligently and can gain the profits in their businesses. That's why even it may be hut or god's temple should have vaasthu rules are compulsory. In the old days the god's temples which are built with the vaasthu rules now a days their children and their grand children are having very good wealth and healths. Why because of these vaasthu principles they have been developing day by day in all the directions. Whenever the vaasthu is deficient they will have to face all kind of problems and losses. Now a days that there is some thing to be observed by the all the old buildings built by the our ancestors or any huts wihtout

vaasthu rules followed that should be corrected will get very rapid developments at all the way. That's why the hut or it may be a god's temple should have the vaasthu they person who have built with perfect vaasthu should have luck and develop in the profitable ways.

To what extent Vaasthu is true:

The vaasthu has been used from the some years but for the truth the vaasthu from that day to today there is vaasthu. In the old days that there were one or two person who have the knowledge of vaasthu. But the people who donot the vaasthu could also got developed. Eventhough that there were no vaasthu in the house the men are built up as vaasthu man. That is why eventhough they have not perfect vaasthu could also developed as luckiest with wealth because of having the features of donation, mercy, and other all the good features they have not thought of the vaasthu. After some passed that there were some kind of changes have come over the weather conditions and the men have also been changed. With these changes in men the mercy, endowment and some of type have been vanished the men have lost the values of humanity 30 members out of 100 have become lazy persons and been depending on their ancestral properties and their parents' properties has been falling into some kind of laziness. But the vaasthu is so much better. Vaasthu does not mean doing the poojas and mantras. Vaasthu means that a person with laziness who has been kept for 5 months in a house having sufficient air, water, and light that the same lazy person will improve to be good person by going through changes from laziness to deligent personality. Hence in this kind of situations no bad thinkings and habits will not come to minds because of ample air, water, and light is available there. To the fact the vaasthu means that as to how to we should keep our files in a order in our office and at the same way we should keep our house in a good order according to Vaasthu. But the vaasthu does not mean any superstition, magic, or talisman. People of all the religions will give respect to vaasthu and there is nothing wrong doing so because air, water, and light are compulsory things to every person without discrimination of caste and religion. Vaasthu does not belong to any single religion. There are so many vaasthu scriptions, sciences and books all over

the world. But it is good to follow vaasthu of home country. The fact is that the vaasthu will show the good path of living by instilling good thoughts into minds. Some people believe in vaasthu very madly and lose their prevailing properties. But to the fact the vaasthu is so simple so that to get good results by following simple rules and the houses are to be built, there is no vaasthu better than that. Most of the people before starting the construction of house will consult with many Siddhanthis for their suggestions of different vaasthus and by the way they will build their house against the vaasthu rules and will have adverse effects thereof. That's why we should know the vaasthu as much as we need it and construct buildings according to vaasthu for the wellbeings of our family, wife and children to be lived happily without problems. Then after that you can let know others around you about the vaasthu, truths, and the benefits that you have had from vaasthu and explain them the importance of vaasthu is. By doing so this will be helpful to you.

Vaasthu for Political leaders:

To become a politician or as a leader that man should be vaasthu man. What does vaasthu man mean? Do wonder like. But for the fact it is not important than the vaasthu in the house the man who stays in the house must be a vaasthu man. In this way vaasthu is developed in man as politician and he can also develop as district leader and can become a state level leader.

The main features that an executive must have.

- Taking share of wellbeings and problems of neighbours.
- To perform some good programmes in the village.
- To give up selfishness and work for others.
- Doing everythings as his own work.

When a executive can do all things mentioned above can become a district level leader.

The features that a district leader must have.

- Whichever programme is held in the district must be attended forthwith.

- Behaved to be taken care of all the party members at all the situations.
- All the programmes and all the works in the district should be performed as his own family works without showing any discriminations and selfishness.
- Behave even with opposition leader with friendly manner as a brother.
- He must and should be stay away from revenges, nepotism, jealous, hatreds etc.
- You can have competition but not the revenge.

In this way improving good qualities into your mind and developed to be a state level politician.

The features that a state level political leader:

- Think of all the districts as his own district.
- Take participation for the wellbeing of all leaders of all districts.
- Must have always an idea of developing the party utmost levels.
- Must think over upto whatever extent we have been doing justice to our state politics.
- Get rid of all the revenges and hatreds with opposition parties and must develop good manners to behave with them as they are your family members.

After becoming good politician must construct house with according to vaasthu and having vaasthu man inside him there so much possibility to become a national leader. That's why every person should become a vaasthu man and can also become a vaasthu politician.

- To be true , to behave in good manner is called vaasthu.
- The house should be built in certain manner.
- Certain methods should be followed.

All these things are a part of vaasthu. Most the political leaders are happened to lose court cases, and win the some court cases and like mental and physical tensions should be there. All these because of that there is not

a vaasthu inside them only, and the houses were not built with perfect vaasthu in which they reside are the main reasons for these kind of troubles they have been facing. So all these persons should know that man should be developed like vaasthu politician and in this way a vaasthu politician will not come across any troubles in their political lives. When they become a vaasthu politician will be successful throughout his life and become a power without opposition and can earn name and fame in his country.

And by the end..

Developed as a great person

Developed as a good man

Can also stand to be an example leaders even to the foreigners

Flourished to be alive in entire life

Having believed in vaasthu and becoming like vaasthu man one can become great personality not only in his own country but also in foreign countries and gain name and fame.

The Vaasthu of interior decoration with sceneries and photos.

Most of the people decorate their houses either new or old one with sceneries of interior decorations. But these sceneries will have some impression on the people who live in that house that's why we have to select the sceneries liked by all members and the hall, dining room, or bed sceneries are to be selected. But we should put those sceneries like by one or two persons in the family and more other persons do not like. Most of the people would like to have look at good sceneries as soon as they woke up in the morning and that way they keep themselves be happy throughout the day. Once a person having looked at the disliked sceneries in the morning there should be some kind of aversion in his mind. In such a situation he cannot do anything work with interest and should be disappointed. The reason for this just the scenery he has looked at. Most of the interior sceneries are fruits, greeneries, small children, and watery trees

should be kept in the house. Not only this we should select these sceneries with consulting with every body in family.

Photos:

Some people do not know which photos are to be kept in house. These people have to so much to know when they keep photos in hall like photographs of national leaders, parents, grandfather and with some sceneries and in this way the house has to be decorated with so many photos. In this way when we decorate we will come to face some troubles. At the simhadwar there should not be kept any type photograph like horoscope chakra etc. When you are willing to keep the photographs of elders who were expired in the hall that must be kept at the corner of northeast. When you want to keep photographs of political leaders that must be kept at south or west side. When you like to keep amusement sceneries with photographs will be ideal. When you think of keeping the photos of gods that should be kept in the East or north. Concerning some artificial articles some precautions must be taken for better effects. Concerning the articles like swords, Shields, Spears, Bows and the articles used by the kings must and should be consulted with Siddhanthi for suggestions at where should be kept what. If not consulted Siddhanthis while keeping all these kind of article some of evil effects should be arised. Hence when keep sceneries, photos and so like should be taken the decision of the members of family and with their consent those decorations are to be done and then only no evil effect will not occur. With these good sceneries there should be development in business, their children have very good mind, and all the members who stay in the house have good health and delightful lives.

Vaasthu and eminent politicians:

In our country that there are so many politicians in all the states and they will lose and win their elections many a time. Some of them having developed as political leaders and for some reasons they have to stay away from the politics. But never a party should be bad. But the members of the party should be good always. The persons who are in the party must

become vaasthu men. When those leaders and members are to be vaasthu men that party should be flourished as a great party. But it is not meaningful that after having joined some party I have lost my election is not right to say. We should never have to blame the party, the party flag, and symbol of a party. When you believe in heartfully respecting it and having performed the activities doing justice to the party any body who like to do this will reach to high positions in that party. The head of the party must have to fortify the party from the gross root level and so that it should be done perform the activities. The main branches of the party are party members and village leaders, district level leaders, state level leaders and all them are to be satisfied by their desires and their needs are being realised and their suggestions should be taken into accounts by the head of party has to recognise them all and the justifiable comprehensive programmes should be performed and should try to improve grip so that the party members have to have confidence in the party. Then only such kind of leader should be called as vaasthu leader. And such a important leader cannot find a defeat nearby his surroundings. That's why the political leaders have to know the defects whichever in them as per the vaasthu and by correcting them all will have to become a vaasthu leader.

The Vaasthu of colors inside and outside.

When the new houses are built the vaasthu of color inside and outside of the house should be colored as per the suggestions of Siddhanthi. Some people will color their houses seeing in the cinemas, TVs, and make it modernized but for the fact should have to be taken into consideration of all desires of all the members in family. If not done this way the coloring as per the suggestions and desires of all the members of the family some of members the family will get health problems. As much as possible the suggestions of Siddhanthi must be taken into account the coloring should be done in the house. When coloring outside the building you have to take of that should not affect the neighbours and that should be healthful to all the coloring should be done outside. Some precautions should be taken as per the colors. The thick colors should be used at borders. The light colors best suits to walls. The gates should be colored with light and dark colors. The

doors and grills should be colored with light colors. In this way the colors are used th people who live in this house will get peace of mind and lead life with happiness and delight.

Most of the people when they construct building are to be fixed with cooling glasses and windows are fixed with costly glasses. In that sense the vaasthu has to be taken into consideration. When the constructions of houses most of the people will fix windows with glasses which are against to the vaasthu. When the glass fittings of windows:

White color glasses are ideal for the windows in the eastern northeast.

White color glasses are to be fixed to eastern south windows.

White color glasses are to be fixed to northern northeast side windows.

White glasses are to be fixed to northern northwest side windows.

Black color glasses are to be fixed to west side windows.

Black color glasses are to be fixed to south side windows.

In this way all the windows are to be changed according to vaasthu the people who live in that house can lead delightful lives.

Sun Rays:

Everyday immediately after got up in the morning must should open windows and doors in the east, and north side so that the sun rays can come into the house. Sometimes you may get up lately and the sunrays crossed away and at that position the sunrays should be transparent throug the window glasses and the light should be there inside house. In that way the houses having the sunrays are allowed into the house should be flourised forever and developed. The people who in that house will lead delightful lives.

- The suggestions of Vaasthu Siddhanthi and religious gurus must be respected and followed.
- Sacrifying animals is not the vaasthu at all.

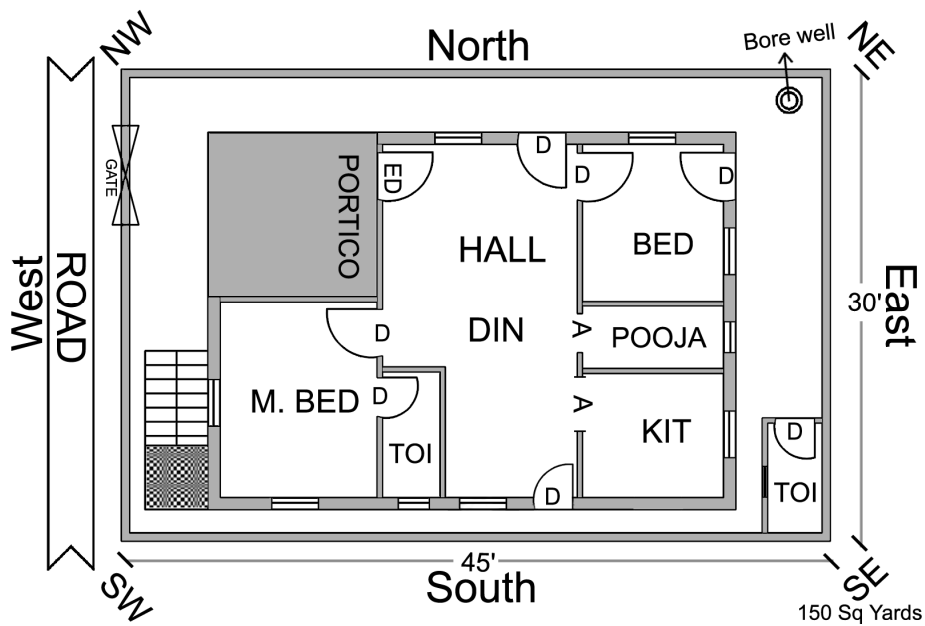

- Black magics, copper sheets, magics and connives are against to Vaasthu.
- Matter of fact vaasthu is an belief only.
- A hardworker should not need better venue.
- Every person who believes in vaasthu will ever be in the successful way.

The method of construction of house according to Vaasthu.

Now a days every person has desire of has belief in vaasthu and having understood the facts of construction of houses. Before to starting a construction the suggestions of Siddhanthi, Engineer and having belief in them the construction has been started will get good results. In fact in every state there should be different type vaasthu rules of construction of building. Whatever the state we are staying in we should have to construct the kitchen room as according to the blowing of south wind. And as per the vaasthu where should be built the pooja room must be built with suggestions of regional Siddhanthi. There are so many available of vaasthu drawing in Andhra Pradesh state that they believe that there should be constructed buildings in others sates with different vaasthu principles. For all this there is a main reason. The people who live in different regions are having different traditions, beliefs and habits and air and light the constructions of buildings should be done but by the construction of building will provide evil effects and the like is not good thing. Because of this the book vaasthu -2 has been written with suggestions of many persons from all corners of the Andhra Pradesh state for the construction of building of successful way the method of building drawing is made. The main contents of book is that the buildings of any kind in Andhra Pradesh state constructed as per the vaasthu the people who live in such a house should be flourished with health, economical, and gain good name in the public and the political leaders will progress in their live with so many benefits. Keeping all these things in view all the things should be done according to vaasthu all the things are taken in consideration a drawing will be drawn. Our vaasthu book is of the worthy of getting rid of the evil effects as per the vaasthu, the

virtuoso, the scholars, and many others who know the science of vaasthu have congratulated us.

A map showing that the method of construction of house in the land extent of 150 Sq.yards with west side road.
